U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, Ark., MARCH, 1924. No. 3.

GENERAL SUMMARY.

The outstanding characteristics of the weather in Arkansas during March were the low temperatures, deficient rainfall, heavy snowfall, and the high winds on the night of the 28th. The mild temperature with which February closed continued until the 5th of March when cooler weather overspread the State continuing until the 24th. During this period the temperature averaged about 11° below normal and near the 10th and 20th was 16° to 20° below with minima of 5° to 8° recorded in the northwestern counties. Lower March temperatures have been recorded in this State but 5 times in the past 34 years and in only 3 years has the monthly mean been lower. Frequent frosts and low temperatures held all vegetation in check and retarded the development of fruit buds. In a few isolated orchards some damage was reported to fruit, but the loss will be negligible. Although the monthly precipitation was only 70% of the normal amount the number of rainy days was normal. The snowfall for the month ranged from 20 inches in the northwestern counties to a trace at a few eastern stations, the average for 70 stations being 7.0 inches. This is the heaviest March snow on record. In March 1914 the snowfall averaged 6.9 inches at 17 stations. The heavy snow and frequent showers kept fields wet and dirt roads impassable in most sections. At the close of the month all farm work was badly behind. On the night of the 28th a disturbance of large extent and marked intensity moved across the Plains to southern Iowa causing strong winds and gales throughout Arkansas, a maximum velocity of 61 miles per hour from the southwest being recorded at Fort Smith, 54 miles per hour from the west at Little Rock. No fatalities were reported in the State but scores were injured and damage to properity estimated at over $1,000,000 resulted. Between 500 and 600 oil derricks were blown down in the El Dorado and Smackover oil territory and damage to property was reported throughout the State. On the morning of the 29th dust was very noticeable in the air. W. C. H.

TEMPERATURE.

The mean temperature for Arkansas during the month of March, as determined from the records of 50 stations, was 46.6° which is 6.0° below normal, all sections showing negative departures. The highest monthly mean was 53.9° at Huttig, the lowest, 39.3° at Nail. The highest temperature recorded during the month was 84° at Huttig on the 29th and at Junction on the 30th while the lowest, 5°, was recorded at Nail on the 10th. Extremes occurred on approximately these dates in all sections.

PRECIPITATION.

The average precipitation for the month of March, as determined from the records of 70 stations was 3.27 inches which is 1.43 inches less than normal, practically all sections showing negative departures. Monthly totals ranged from 6.03 inches at Marshall to 1.25 inches at Searcy. Snow in appreciable amounts fell over practically the entire State and averaged 7 inches. Monthly totals ranged from about 20 inches in northwestern counties to a trace at two eastern stations. The greatest precipitation in 24 consecutive hours was 3.45 inches at Marshall on the 9th. The average number of rainy days was 8.

MISCELLANEOUS PHENOMENA.

(Dates and number of stations reporting.)

Thunderstorms:- 4th, 11; 23d, 2; 26th, 1; 27th, 1; 28th, 11; 29th, 18.

High Winds:- Throughout the State the night of the 28-29th.

Solar Halos:- 7th, 1.

Lunar Halos:- 17th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates ‡‡Post-office addresses of these stations as follows:- Junction Randolph, La.; Lutherville, R.F.D. No 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for March, 1924.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, Ark., APRIL, 1924. No. 4.

GENERAL SUMMARY.

The month opened unseasonably cool, temperatures being 14° to 18° below the seasonal average with 18° recorded at northwestern stations and freezing to the southern border counties. This cool wave continued until the 6th when temperatures were again above normal. From the 14th to the 26th temperatures were 14° to 16° above normal with 94° recorded at several stations. During the remainder of the month near normal temperature conditions prevailed. The mean temperature, 61 4°, was the same as during April, 1923. The precipitation averaged 4.99 inches, this being the first month with an excess during this year. Showers, mostly light to moderate but reaching an inch or more in a few instances occurred about every four days until the last six days of the month when general rains were reported over practically the entire State, 3.00 to 5.00 inches occurring at numerous stations. These heavy rains brought sudden rises in all the streams, but none except the Petit Jean reached flood stage before the close of the month. The month was favorable for planting and germination, corn being planted and up in most sections and cotton planting well advanced. Strawberries were in excellent condition and picking in progress in southern and central portions at the close of the month. A tornado occurred a few miles north of Texarkana at 2:30 p. m. of the 29th, moving from southwest to northeast over a path about 100 yards wide. Property damage estimated at $25,000 was sustained, one person killed, and 17 injured.

W. C. H.

TEMPERATURE.

The mean temperature for April, as determined from the records of 47 stations, was 61.4° which is 0.2° above normal, positive and negative departures occurring in all sections of the State The highest monthly mean was 66.0° at Huttig, the lowest, 55.1° at Nail. The highest temperature recorded during the month was 94° at Subiaco on the 14th and at Dardanelle and Pine Bluff on the 15th. The lowest temperature recorded was 18° at Dutton and Gravette on the 1st. Extremes occurred on approximately these dates throughout the State.

PRECIPITATION.

The average precipitation for the month of April, as determined from the records of 67 stations, was 4.99 inches which is 0.21 inch above normal. Positive departures occurred in the Arkansas, Ouachita, and lower White river valleys and in the extreme northwestern section of the State while in most other sections negative departures were recorded. Monthly totals ranged from 8.53 inches at Waldron to 2.92 inches at Mountain Home. The greatest precipitation in 24 consecutive hours was 5.23 inches at Waldron on the 29th. The average number of rainy days was 8.

MISCELLANEOUS PHENOMENA.

State Means and Extreme				61.4	+ 0.2	94	14†	18	1	55	4.99	+0.21	5.23	0	8	14	6	10	s.	E. O. Allen.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. **T.** Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for April, 1924.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., MAY, 1924. No.5.

GENERAL SUMMARY.

With the exception of May 1907 and 1917 this was the coldest May Arkansas has experienced during the last 34 years. The weather was almost continuously cooler than the average for the season, there being not more than 7 or 8 days during the month when the temperature was above normal. The warmest weather of the month occurred about the 18th or the 28th when 88° to 90° occurred in most sections, but neither of these warm periods was of more than 3 days duration. A temperature of 30° was reported at 2 northwestern stations on the 11th and light frost occurred at several stations.

The rainfall for the month was about 90% of the May normal. Little fell during the first decade, during the second light showers occurred in all sections, while during the third by far the greater part of the precipitation occurred. The heavy rains which characterized the closing days of April brought flood stages on the Petit Jean from the 1st to the 4th and on the Arkansas at Dardanelle on the 3d. Some damage was done to crops in the lowlands, but the amount was not large. The rains at the close of this month brought bankfull stages interferinging with farm work in the lowlands

There was more than the usual number of clear days during May and the sunshine was practically normal, but owing to the continued cool weather conditions were unfavorable for most crops, especially so for cotton. Cotton did not come up to a stand in most sections and where there were stands much of it died, making replanting necessary. The cool weather was favorable for the strawberry crop, keeping the berries from ripening too rapidly and making the picking possible with fewer hands and less expense. The showers the latter part of the month extended the season making returns to the grower much greater than otherwise would have been.

One person was killed and several injured by a tornado which zigzagged across Washington County about 6:30 p. m. of the 28th, the greatest damage occurring at Farmington. Seven houses were blown to pieces, one struck by lightning and burned, and orchards were badly damaged. The tornado was followed by heavy rain and hail, apple orchards, grape vineyards, and strawberries being damaged, the total loss being estimated at over $100,000. A straight blow at Fort Smith on the evening of the 27th, during which the wind reached a maximum velocity of 64 miles per hour from the northwest, did damage estimated at $75,000. A second storm on the 28th was probably a tornado near the end of its course. During this storm the wind reached a velocity of 70 miles per hour from the northwest. There was no definite path of destruction in Fort Smith and no report of a tornado cloud. The damage from this second storm is estimated at $25,000. W. C. H.

TEMPERATURE.

The mean temperature for April, as determined from the records of 50 stations, was 64.6° which is 4.6° below normal, all stations showing negative departures varying from 7.0° at Bee Branch to 1.6° at Dardanelle. The highest monthly mean was 69.0° at Pine Bluff and Huttig, the lowest 58, at Nail. The highest temperature recorded during the month was 94° at Subiaco on the 18th and Pine Bluff on the 28th. The lowest was 30° at Dutton and Gravette on the 11th. The greatest daily range was 46° at Dutton on the 3d.

PRECIPITATION.

The average precipitation for the month of May, as determined from the records of 69 stations, was 4.64 inches which is 0.48 inch less than normal. Positive departures were confined principally to the White, Black, and upper St. Francis River valleys and a narrow stretch of country extending from Phillips County southwestward to Miller County, negative departures elsewhere. Monthly totals ranged from 7.86 inches at Jonesboro to 2.44 inches at Little Rock. The greatest precipitation measured in 24 consecutive hours was 3.63 inches at Jonesboro on the 29th. The average number of rainy days was 8.

MISCELLANEOUS PHENOMENA.

(Dates and number of stations reporting.)

Thunderstorms:- 6th, 8; 7th, 8; 9th, 2; 13th, 7; 18th, 1; 19th, 3; 20th, 10; 21st, 5; 23d, 8; 24th, 15; 25th, 1; 26th, 14; 27th, 11; 28th, 20; 29th, 16; 30th, 1; 31st, 2.

Heavy Hail:- Subiaco, 23d; Springdale, Johnson, 28; Conway, 29th.

Killing Frost:- Gravette, Dutton, 11th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for May, 1924.

CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, Ark., JUNE, 1924. No. 6.

GENERAL SUMMARY.

Temperatures were somewhat below normal during the first week of June and considerably below on the 30th while during the remainder of the month they were generally above, the monthly mean for the State being 1.7° above normal. Precipitation totals for the month averaged below normal, but the geographical distribution was irregular, departures varying from +6.35 inches at Calico Rock to —3.87 inches at Portland. Although showers were mostly light they occurred with about normal frequency and were favorable for late planted cotton, however stands are not good in many fields, the cool weather of May and the first days of this month interfering seriously with germination and growth. As a whole the month was favorable for corn and the latter portion for cotton, both making excellent progress. Corn was in good to excellent condition at the close of the month while cotton was poor in a few localities, fairly good to very good elsewhere. Few weevil were reported at the close of the month.

The White River was above flood stage at Calico Rock on the 12th and at Batesville on the 13th, practically flood stage at Newport and Georgetown a few days later. A wind and rain storm swept the upper White River Valley on the 17th uprooting trees damaging buildings, and washing out the track of the Missouri Pacific's White River division for about 15 miles. The loss due to the wind and the flood is estimated at over $100,000. W. C. H.

TEMPERATURE.

The mean temperature for June, as determined from the records of 50 stations, was 78.5° which is 1.7° above normal, positive departures being recorded in practically all sections. The highest monthly mean was 82.6° at Huttig, the lowest, 72.0°, at Nail. The highest temperature recorded during the month was 105° at Texarkana on the 12th, the lowest 42° at Dutton on the 2d. The lowest occurred from the 1st to the 3d in most sections of the State, the highest on different dates. The greatest daily range was 40° at Mount Ida on the 4th.

PRECIPITATION.

The average precipitation for June, as determined from the records of 71 stations, was 3.64 inches which is 0.44 inch below normal. Practically all stations south of the Arkansas River showed nagative departures with positive prevailing to the northward. Monthly totals ranged from 0.27 inch at Portland to 9.90 inches at Calico Rock. The greatest amount measured in 24 consecutive hours was 4.00 at Pindall on the 11th. The average number of rainy days was 8.

Late Reports: Osceola, May, 1924: Mean temperature 64.6°. Total precipitation 4.09.

Correction: Annual, 1923, Page 53: Calico Rock, September departure from the normal should be –1.18.
El Dorado, November departure should be –1.07.
Eureka Springs, Annual precipitation should be 53.04.
Helena, Annual precipitation should be 68.47.
Mammoth Spring, July departure should be –1.10. November departure should be –1.09.
Subiaco, November total precipitation should be 3.48.
Waldron, Annual precipitation should be 64.42.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. **T.** Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and smmaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville, R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for June, 1924.

§§ Instruments are read in the morning; the maximum temperature then read is credited to the preceding day, on which it almost always occurs.

UNAR

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., JULY, 1924. No. 7.

GENERAL SUMMARY.

The outstanding characteristics of the weather in Arkansas during the month of July, 1924, were the unseasonably low temperatures during the first decade and the dry weather in the southern counties. The month opened unseasonably cool and temperatures were below normal over most of the State until the 11th. A temperature of 40° was recorded at Corning on the 1st, this being the lowest July temperature on record in Arkansas' Climatological history. During the remainder of the month temperatures were generally above normal with maxima 100° or higher in most sections the 23d and 24th. There were showers in the State throughout the month, the greatest frequency being from the 11th to 25th. In southern counties amounts were light, none occurring at two stations, while in Benton County amounts were over nine inches. The weather was favorable for cotton, which made very good progress in most sections of the State, and at the close of the month was blooming and fruiting satisfactorily, the weevil infestation being light and damage negligible. Corn made very good to excellent progress in the northern half of the State, but in many southern localities the crop was badly damaged by the hot dry weather. Other crops made good progress in northern and central sections, but were badly damaged in in southern portions where the drought was severe.

A woman was killed by lightning near Little Rock, July 15th.

W. C. H.

TEMPERATURE.

The average July temperature for 55 stations in Arkansas was 79.0° which is 0.9° below normal, all stations in the northern half of the State showing negative departures, a number in the southern positive. The highest monthly mean was 83.2° at Pine Bluff; the lowest, 72.2° at Dutton. The highest temperature recorded was 110° at Pine Bluff on the 23d and 24th; the lowest, 40° at Corning on the 1st. Extremes occurred near these dates throughout the State. The greatest daily range was 44° at England on the 28th.

PRECIPITATION.

The average July precipitation for 79 stations in Arkansas was 2.35 inches which is 1.57 inches below normal, positive departures occurring in northwestern counties and at a few stations in north central counties, negative elsewhere. Monthly totals ranged from 9.46 inches at Eureka Springs to none at Princeton and Whitecliffs. The greatest amount measured in 24 consecutive hours was 3.45 inches at Eureka Springs on the 31st. The average number of rainy days was 5.

LATE REPORTS.

Magnolia: May total precipitation 4.40; number of rainy days 4. June total precipitation 3.70; number of rainy days 5

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and smmaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing: for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for July, 1924.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., AUGUST, 1924. No. 8.

OCT 11 1924

UNIVERSITY OF ILLINOIS

GENERAL SUMMARY.

When the weather of August, 1923 is compared with that of August, 1924 a striking similarity is found, the departures from the normal being practically the same both months. August, 1924 opened with temperatures above normal and the daily means were above throughout the month with the exception of about 5 or 6 days when slightly below. The monthly mean was 2.8° above the 30 year average, but no exceedingly high temperatures occurred, all extremes being well within the limits established by previous records. There was a slight excess of sunshine with 5 more than the normal number of clear days, 2 less than the normal number of rainy days. Precipitation was deficient in most sections of the State being lightest in southern counties. Owing to the hot dry weather cotton made poor progress in southern counties but fairly good to very good in central and northern, boll weevil infestation continuing light and damage negligible. Late corn was seriously damaged in southern sections by the continued dry weather, but in northwestern sections where rains were more frequent, an excellent corn crop is assured. The peach and grape crops in northwestern Arkansas were unusually good. A woman was killed by lightning eight miles south of Lonoke, August 23d.

W. C. H.

TEMPERATURE.

The mean temperature for the State, based on the records of 55 stations, was 82.2°, which is 2.8° above normal, all stations except Pocahontas showing positive departures Monthly means ranged from 89.6° at Rison to 76.6° at Dutton. The highest temperature recorded during the month was 108° at Pine Bluff on the 3d, the lowest 43° at Corning on the 15th. The dates of extremes varied in different sections of the State. The greatest daily range was 47° at Magnolia on the 20th.

PRECIPITATION.

The average precipitation for the State as determined from the records of 79 stations, was 2.40 inches which is 1.43 inches less than normal. Positive departures occurred at a few stations in the northeastern counties and at one station in the southwestern, negative elsewhere. Precipitation totals ranged from 6.46 inches at Heber Springs to a trace at Whitecliffs. The greatest amount measured in 24 consecutive hours was 2.52 inches at Mountain Home on the 12th. The average number of rainy days was 5.

MISCELLANEOUS PHENOMENA.

(Dates and number of stations reporting.)

Thunderstorms:- 1st, 17; 2d, 15; 6th, 25; 7th, 9; 8th, 1; 9th, 17; 10th, 20; 11th, 21; 12th, 1; 15th, 6; 16th, 27; 17th, 17; 18th, 7; 19th, 1; 20th, 2; 21st, 4; 22d, 14; 23d, 23; 24th, 25; 25th, 2;28th, 8; 29th, 3; 30th, 11, 31st; 27.

Lunar Halos:- 9th, 1; 12th, 1.

Solar Halos:- 6th, 1; 22d, 1; 27th, 2; 28th, 1.

Maderate Hail:- Eureka Springs,10th; Clinton, 24th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction Randolph, La.; Lutherville R.F.D. No. 2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for August, 1924.

CLIMATOLOGICAL DATA.

THE UNIVERSITY OF

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., SEPTEMBER, 1924. No. 9.

GENERAL SUMMARY.

The outstanding characteristics of the weather in Arkansas during September, 1924, were the low monthly mean temperature and the low temperatures recorded the closing days of the month. The monthly mean, 69.7°, is with but 2 exceptions the lowest since state wide records have been kept, 1902 and 1918 being the only years with lower September means. The lowest temperature recorded was 29° at Dutton on the 30th while the lowest September temperature on record is 28° at Corning on the 29th, 1899. Light frost occurred at several stations the 29th and 30th and killing frost was reported at 2 stations, however the damage was slight, most crops being matured and out of the way of frost.

Most of the precipitation fell on the 1st, 2d, 12th, 13th, and 17th to the 22d with light showers at several stations the 27th and 28th. Although there was a slight excess measured the rain did not interfere seriously with farm work and the close of the month found picking and ginning of cotton well under way in southern counties and starting in northern, and the soil in excellent condition for fall plowing. Other crops were maturing under favorable conditions. The rivers of the State were at low stages, the Arkansas at Little Rock being below zero for the first time since November, 1922.

A small tornado occurred at Hot Springs a few minutes after 3:00 p. m. of the 19th, unroofing a portion of the Eastman Hotel, destroying a church and some smaller buildings, uprooting many trees and doing considerable other damage. The losses were estimated at over $100,000. No lives were lost and no serious injury to anyone was reported. A wind storm (straight blow), accompanied by rain swept the southern part of Lawrence County the night of the 19th doing some damage to houses, barns, and growing crops. Clinton also reported a straight blow the 19th with slight damage.

W. C. H.

TEMPERATURE.

The mean temperature for Arkansas during September, 1924, as determined from the records of 54 stations, was 69.7° which is 4.2° below normal, all stations showing negative departures except Pine Bluff where the mean was 0.1° above normal. The highest monthly mean was 75.4° at Texarkana, the lowest, 63.3° at Nail. The highest temperature recorded during the month was 103° at Hope and Texarkana on the 7th and 8th, and at Centerpoint on the 8th. The lowest was 29° at Dutton on the 30th. The highest occurred in practically all sections during the first decade, the lowest about the 30th.

PRECIPITATION.

The average precipitation for the month of September, as determined from the records of 77 stations, was 3.99 inches which is 0.66 inch above normal. Negative departures were confined principally to the southern border counties from Union westward and from Scott, Polk, and Howard northeastward, positive elsewhere. Monthly totals ranged from 11.10 inches at Brinkley to 0.86 inch at Junction. The greatest amount measured in 24 consecutive hours was 3.22 inches at Bentonville on the 1st and 2d. The average number of rainy days was 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction Randolph, La.; Lutherville R.F.D. No.2, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for September, 1924.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist.

VOL. XXVIII. LITTLE ROCK, ARK., OCTOBER, 1924. No. 10.

THE LIBRARY OF THE
NOV 21 192-
UNIVERSITY OF ILLINOIS

GENERAL SUMMARY.

The outstanding characteristic of the weather in Arkansas during October, 1924, was the dry weather. The average rainfall for the State was only 0.29 inch which is the least monthly average since state wide records have been kept, not only for the month of October, but for any month of the year. The nearest approach to this record was 0.47 inch during November, 1910, while the driest previous October was in 1908 when the average was 0.48 inch. During October, 1924, there were 3 stations reporting no rain, 9 a trace, and only 7 as much as an inch. Rain fell on an average of 1 day during the month, the 31st in most sections. The dry weather was favorable for harvesting all crops, especially for picking cotton and the close of the month found this work practically completed in southern counties and nearing completion in northern. It was too dry for fall plowing and but little has been done. The dry weather greatly increased the fire hazard.

Temperatures were somewhat below normal during the first 3 days of the month and also from the 22d to the 26th, above during the remainder. Heavy to killing frosts occurred over most of the State the 23d and 24th, but damage was negligible as all crops were matured. All streams were at low stage, the Arkansas at Little Rock being lower than during September. No destructive wind or hail storms were reported.

W. C. H.

TEMPERATURE.

The mean temperature for the month of October, as determined from the records of 50 stations, was 64.9° which is 2.6° above normal. Only 2 stations, Dardanelle and Dumas, recorded a mean temperature below normal. The highest monthly mean was 69.8° at Texarkana, the lowest 58.1° at Dutton. The highest temperature recorded during the month was 96° at Searcy on the 12th, the lowest, 21° at Dutton on the 25th. The greatest daily range was 58° at Corning on the 28th.

PRECIPITATION.

The average precipitation for October, as determined from the records of 73 stations, was 0.29 inch which is 2.71 inches below normal, all stations showing negative departures. Monthly totals ranged from 2.13 inches at Eureka Springs to none at Corning, Patterson, and Stuttgart. The greatest amount measured in 24 consecutive hours was 1.75 inches at Eureka Springs on the 5th. The average number of rainy days was 1.

MISCELLANEOUS PHENOMENA.

(Dates and number of stations reporting.)

Thunderstorms:- 5th, 14; 6th, 1; 7th, 1; 9th, 2.
Solar Halos:- 15th, 1; 16th, 1; 29th, 1.
Dense Fog:- 6th, 1.
Killing Frost:- Numerous stations 23d, 24th, and 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and smmaries. Reference letters [a],[b],[e], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction Randolph, La.; Lutherville R.F.D. No. 1, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for October, 1924.

UNAR

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
CHARLES F. MARVIN, Chief.

CLIMATOLOGICAL DATA.

HARVEY S. COLE, Meteorologist.

VOL. XXIX. LITTLE ROCK, ARK., NOVEMBER, 1924. No. 11

GENERAL SUMMARY.

The weather during the first half of November was mild, the temperature being above normal most of the time, while during the latter half of the month somewhat cooler weather prevailed. Practically all the precipitation occurred from the 7th to the 15th and in most sections the monthly totals were about two thirds of the normal amount. Conditions were favorable most of the month for picking cotton, gathering corn, threshing rice, and other out door activities. The rains were beneficial for wheat and oats, but the soil in many localities continued too dry for fall plowing. Dirt roads were in good condition most of the month and the rivers of the State at low stages.

The first killing frost this autumn occurred at a few stations September 30th, over mort of the State October 23d to 25th, and in remining localities November 24th to 28th. The length of the growing season, (from the last killing frost in spring until the first in autumn) for 65 stations was 210 days and ranged from 172 days at Dutton to 255 days at Portland. W. C. H.

TEMPERATURE.

The mean temperature for the State, as determined from the records of 51 stations, was 53.4° which is 1.9° above normal, all stations except Bee Branch, Dardanelle, Mammoth Spring, and Pocahontas showing temperatures normal or above. Monthly means ranged from 47 1° at Mammoth Spring to 58.4° at Magnolia. The highest temperature recorded during the month was 88° at several stations on the 2d and later dates, the lowest 15°, at Dutton on the 25th and Gravette the 27th. The greatest daily range was 56° at Batesville on the 2d.

PRECIPITATION.

The average precipitation for November, as determined from the records of 72 stations, was 2.36 inches which is 1.21 inches below normal, all stations except 8 showing negative departures. Monthly totals ranged from 5.60 inches at Hot Springs to 0.20 inch at Huttig. The greatest amount measured in 24 consecutive hours was 3.27 inches at Camden on the 12th. Snow in an appreciable amount was measured at Bentonville and Rogers while a trace occurred at several stations in western and northwestern counties. The average number of rainy days was 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c] appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville R.F.D. No. 1, Lamar, Ark.; Springbank, Doddridge, Ark.

Daily Precipitation for November, 1924.

VOL. XXIX. LITTLE ROCK, ARK., DECEMBER, 1924. No. 12

GENERAL SUMMARY.

December was a month of abnormal temperatures. On the 6th, 7th, 15th, 16th, 17th, and 18th temperatures closely approached the highest December temperatures on record throughout the State while the last decade was decidedly cold. A minimum of 8° below zero occurred at Gravette, this being the lowest temperature of the year and the lowest December temperature reported since 1917, when the lowest on record, 21° below zero, occurred at Gravette and Mammoth Spring. Practically all of the precipitation fell from the 4th to the 8th, 16th to 19th, 22d to 24th, and 30th and 31st. The rains were very favorable for winter crops and at the close of the month the soil moisture was sufficient for plowing in most sections. The low temperatures of the last decade killed some late sown wheat and oats and stopped outdoor work except butchering, hauling wood, logging, and spraying and pruning orchards. Snow fell over most of the northern half of the State varying from 4.0 inches at Corning to a trace at numerous stations. Sleet occurred from the 18th to the 24th at a number of places but the damage was slight. The 7th was an abnormally warm day and in the afternoon wind, rain, and hailstorms occurred at a number of stations. At Hot Springs the damage was heaviest and the aggregate for the entire State amounted to several thousand dollars. A tornado moving from the southwest to the northeast over a path about 150 yards wide destroyed several houses, barns, and considerable timber near Beebeville, Woodruff County, the afternoon of the 7th Three members of one family were killed and another lost the sight of an eye as a result of the storm. On the evening of the 7th a man was killed by lightning at Magnolia and a barn was destroyed by lightning at Pine Bluff, the loss being estimated at $6,000.

W. C. H.

TEMPERATURE.

The mean temperature for the State during December, as determined from the records of 54 stations, was 41.4° which is 1.7° below normal, 12 stations only showing monthly means above normal and these were confined principally to the southern counties. Monthly means ranged from 49.6° at Huttig to 33.2° at Mammoth Spring. Extremes ranged from 86° at Grannis on the 14th to 8° below zero at Gravette on the 25th. Extremes occurred on about these dates over the greater part of the State. The greatest daily range was 57° at Mount Ida on the 19th.

PRECIPITATION.

The average precipitation for December, as determined from the records of 73 stations, was 3.65 inches which is –0.44 inch below normal. Positive and negative departures occurred throughout the State. Monthly totals ranged from 1.00 inch at Whitecliffs to 5.85 inches at Dutton and Pine Bluff. The greatest amount measured in 24 consecutive hours was 3.70 inches at Pine Bluff on the 8th. An appreciable amount of snow fell at 18 stations and averaged 1.0 inch. The average number of rainy days was 6.

MISCELLANEOUS PHENOMENA.

(Dates and number of stations reporting.)

Thunderstorms:- 2d, 1; 4th, 6; 5th, 1; 6th, 8; 7th, 31; 8th, 10; 14th, 1; 15th, 1; 17th, 1; 18th, 5; 19th, 3.

Solar Halos:- 6th, 1; 15th, 1.

Lunar Halos:- 5th, 1; 8th, 1; 12th, 1.

Sleet:- 10 th, 1; 18th, 2; 19th, 10; 21st, 1; 22d, 11; 23d, 8; 24th, 7; 28th, 1; 29th, 4.

Heavy Hail:- 7th, Helena, Danville, Grannis, Hot Springs, Searcy, Morrillton, Perry.

Moderate Hail:- 7th, Rogers, Eureka Springs, Stuttgart, Benton.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and smmaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville R.F.D. No. 1, Lamar, Ark.; Springbank, Doddridge, Ark., Dam No. 1, Judsonia, Ark.

Daily Precipitation for December, 1924.

CLIMATOLOGICAL DATA.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist.

L. XXIX. LITTLE ROCK, Ark., YEAR, 1924. No. 13.

GENERAL SUMMARY.

he outstanding characteristics of the weather in Arkansas ing 1924 were the negative precipitation departures, the un-ly cold weather, heavy snowfall and high winds of March, the cold weather of May, July, and September. Departures n the normal temperature were negative in January, positive February, negative in March and continued to swing back forth from positive to negative and back to positive through-practically the entire year. The annual mean was 60.1° ch is 0.9° below normal, this being the first year with a bnormal temperature since 1920 and the lowest annual n since 1917. Station annual means ranged from 54.1° at tton to 64.9° at Huttig and extremes from 110° at Pine Bluff y 23d and 24th to — 8° at Gravette on December 25th. gust with a monthly mean temperature of 82.2° was the rmest month of the year while January with a mean of 36.1° s the coldest. The highest monthly mean for any station was 6° at Rison during August and the lowest was 29.0° at Nail ring January.

When the annual precipitation of 1924 is compared with that 1923 quite a contrast is found. The total for 1923 was, with one exception, the greatest on record while the 1924 total 37.03 inches is, with but one exception, the least on record. ring April and September precipitation totals were slightly ve normal while during the remainder of the year they were ow. Annual totals ranged from 49.74 inches at Eureka Springs 23.93 inches at Whitecliffs. The heavier totals occurred in the rthwestern counties, the lighter in southwestern. As in most ars, totals in the upper Arkansas Valley, Logan, Johnson, d Franklin counties, was light. April with an average precip-tion of 4.99 inches was the wettest month of the year and tober with 0.29 inch the driest. The greatest monthly total s 11.10 inches at Brinkley during September while several tions recorded no precipitation during July and October. All tions except Wynne reported an appreciable amount of snow, e average for the year being 7.9 inches, ranging from 27.8 ches at Bentonville to a trace at Wynne. The greater part of e snow fell during March, the average being 7.0 inches. Twenty ches was measured at a few stations in northwestern counties. While the precipitation was defecient in all seasons, the driest eather occurred in July and October, so the damage to grow-g crops was not as great as it might otherwise have been. Corn as seriously damaged in many localities by the dry weather, t cotton suffered little material damage except in a few local-ies. The hot, dry weather of August held boll weevil in check, e infestation being light, and in most sections damage was egligible.

The year opened moderately cold, temperatures below zero eing recorded on January the 6th in northern and northwest-n counties and 10° to 12° to the southern border. Although here were short periods with temperatures normal or above the eather was cold during the first half of February, March, and arly in April. Fruit bud development was retarded and all egetation held in check. May was unusually cool and as a re-ult cotton did not come up to a stand in most sections and here there were stands much of it died making replanting nec-ssary. The cool weather was favorable for the strawberry crop, keeping the berries from ripening too rapidly making picking and marketing possible with fewer hands and less expense than usual. July was exceptionally dry and the first decade unusually cold, a temperature of 40° being recorded at Corning on the 1st, which is the lowest July temperature in Arkansas' climatological history. Day temperatures of 100° were frequent in the southern counties the latter part of July and during August. The mean temperature for September was considerably below normal, the first killing frost occurring at Dutton and Gravette on the 30th. October, 1924, was the driest October on record, there being an average of only one rainy day during the month and an average monthly total of only 0.29 inch. Crops were harvested under favorable conditions, cotton picking being completed in southern counties and nearly completed in northern by the close of the month. The growing season was about 25 days shorter than usual. Killing frost occurred over most of the State October 23d to 25th and in remaining sections November 24th to 28th. The length of the growing season, (from the last killing frost in spring to the first in autumn) for 65 stations was 210 days and ranged from 172 days at Dutton to 255 days at Portland. The temperature during the crop season, April 1st to October 31st, averaged 0.3° below normal while the total precipitation. 22.30 inches, was 5.76 inches less than normal. The rivers of the State were at moderately high stages during April and May, but no disastrous floods occurred. Damaging straight blows were reported in March, May, and September and four tornadoes occurred in the State during the year. There were 193 clear days, 68 partly cloudy, 105 cloudy, and 74 with 0.01 inch or more precipitation. Sunshine averaged about 64% of the possible amount. W. C. H.

WEATHER BY MONTHS.

January:— The weather during January was cold, the mean temperature, 36.1° being the lowest January mean since 1918. Precipitation averaged 75% of the normal amount and was mostly in the form of rain. The ground was frozen in all parts of the State during the first decade and remained frozen in the northern counties practically the entire month. The cold weather and frequent rains kept dirt roads impassable and fields too wet for plowing most of the month. The weather was favorable for wheat, rye, meadows and fruit at the close of the month all were in excellent condition.

February:— The temperature for the month was slightly above normal, though a Cold Wave during the first decade brought the lowest February temperatures since 1919. The total precipitation was considerably below normal, but the number of rainy days was normal, light precipitation occurring throughout the month. The Cold Wave the first of the month and cool weather during the last decade kept fruit dormant. Wheat and rye continued in good condition but oats were dan aged by the freezing weather of the first decade.

March:— The outstanding characteristics of the weather in March were the low temperatures, deficient rainfall, heavy snowfall, and the high winds on the night of the 28th. From the 6th to the 24th cold weather prevailed with temperatures averaging about 11° below normal and near the 10th and 20th minima of 5° to 8° were recorded in northwestern counties. Frequent frosts and low temperatures held fruit and vegetation in check. The snowfall for the mont averaged 7.0 inches with 20 inches recorded in some northwestern counties, this being the heaviest March snowfall on record. On the night of the 28th there were strong winds and gales throughout Arkansas. Considerable damage was done at Fort Smith, and in the El Dorado and Smack-

over oil fields between 500 and 600 oil derricks were blown down, the damage being estimated at over $1,000,000. On the morning of the 29th dust was very noticeable in the air.

April:— The month opened cool, temperatures of 18° being recorded in northwestern counties and freezing to the southern border. Showers, mostly light to moderate but reaching an inch or more at some stations, occurred about every four days until the last six days of the month when 3.00 to 5.00 inches occurred at numerous stations. These heavy rains brought sudden rises in all the streams, but none except the Petit Jean reached flood stage. Strawberries were inexcellent condition at the close of the month and picking was in progress. A tornado occurred at Texarkana on the 29th which killed one person and did property damage estimated at $25,000.

May:— May was exceptionally cold, the monthly mean temperature being 4.6° below normal with freezing recorded in northwestern counties on the 11th. The heavy rains the closing days of April brought high stages in most of the streams of the State early in May, flood stages being reached at Danville on the Petit Jean and at Dardanelle on the Arkansas. Heavy rain the last of the month brought high stages again but damage was slight. Cotton did not come up to a good stand on account of the cold weather, but strawberries ripened under favorable conditions. A tornado occurred in Washington County on the 28th doing considerable damage. Straight blows were reported at Fort Smith on the 27th and 28th, the total damage from these three storms being estimated at $200,000.

June:— As a whole the month was favorable for corn and the latter portion for cotton, both making excellent progress. Corn was in excellent condition at the close of the month while stands of cotton were poor, the crop being in poor condition in a few localities, fairly good to very good elsewhere. The White River was above flood stage at Calico Rock and Batesville on the 12.h and 13th and near flood later at Newport and Georgetown. A wind and rain storm in the upper White River Valley on tl 17th did damage estimated at over $100,000.

July:— The first decade of July was unseasonably cool, temperature of 40° being recorded at Corning. The month wa abnormally dry especially in southern counties. Cotton contin ued to make good progress in most sections of the State and a the close of the month was blooming and fruiting satisfactorily the weevil infestation being light. Corn made good progress i northern counties, but in the southern suffered considerabl damage from the hot dry weather.

August:— August was warm and dry, the temperature av eraging 2.8° above normal and the precipitation 1.43 inche below. Day temperatures of 100° or higher occurred at numer ous stations throughout the month, 108° at Pine Bluff on th 3d being the highest recorded. Cotton continued to make satis factory progress except in a few southern localities, but lat corn was seriously damaged by the continued dry weather. Th peach and grape crops in northwestern Arkansas were unusual ly good.

September:— The temperature averaged 4.1° below normal this being with but two exceptions the lowest on record for September. Killing frost occurred at Dutton and Gravette on the 30th. Although there was a slight excess of precipitation the rains did not interfere seriously with farm work. A tornado occurred at Hot Springs on the 19th doing damage estimated at over $100,000. Wind storms did damage in Lawrence and Van Buren counties on the 19th.

October:— There was an average of only one rainy day during the month and the average precipitation was only 0.29 inch. This was the driest month of which we have a record in Arkansas. The dry weather was favorable for harvesting, but it was too dry for fall plowing. All streams of the State were at low stages.

Departures from the normal precipitation are based on records of ten or more years.

Continued from page 50.

November:— The weather during the first half of November was mild, the latter half cool. The rainfall averaged 2.36 inches, 1.21 inches less than normal. Most of the precipitation occurred from the 7th to the 15th and was sufficient for wheat and oats, but the soil in many localities continued too dry for fall plowing. Dirt roads were in good condition most of the month and the rivers continued at low stages.

December:— December was a month of abnormally high and also abnormally low temperatures, extremes ranging from 86° at Grannis on the 14th to 8° below zero at Gravette on the 25th. Precipitation, while slightly below normal, was sufficient to relieve the drought and at the close of the month plowing was possible. The 7th was abnormally warm. A tornado occurred in Woodruff County on the 7th killing three people and doing considerable property damage.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record: but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. Reference letters [a], [b], [c], appearing in the table indicate number of days missing: for example, [b] represents two days missing. † Also on later dates. ‡‡ Post-office addresses of these stations as follows:—Junction, Randolph, La.; Lutherville, R. F. D. No. 1, Lamar, Ark. Springbank, Doddridge, Ark.

Monthly and Annual Mean Temperatures for the Year 1924, with Departures from the Normal.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXX LITTLE ROCK, ARK., JANUARY, 1925 No. 1

GENERAL SUMMARY

Moderate winter weather prevailed during the first two decades of the month, but about the 20th temperatures began rising and by the 25th were 12° to 16° above normal throughout the State. This warm weather was followed by a moderate cold wave, zero temperatures being recorded at a few stations in northern and northeastern counties and 18° to 20° to the southern border. Frequent freezing and thawing did considerable damage to oats in some localities, but the snow which fell the latter part of the month remained on the ground in northern counties, making conditions more favorable for these crops. Conditions were generally favorable for wheat, rye, and fruit. The dry weather which characterized the year, 1924, continued through January, 1925, precipitation totaling only 63% of the normal amount, the soil being too dry for plowing in some localities in southern counties. Most of the precipitation fell as light to moderate showers and was confined principally to the 1st, 9th to 12th, 15th to 19th, and 26th and 27th, that of the 27th being snow over a greater part of the State. There were no destructive hail or wind storms during the month.

W. C. H.

TEMPERATURE

The mean temperature for the month of January, as determined from the records of 52 stations, was 40.8° which is 0.1° below normal, positive and negative departures occurring throughout the State. Monthly means ranged from 46.6° at Huttig to 33.8° at Mammoth Spring. Extremes ranged from 76° at Marked Tree on the 6th to — 4° at Mammoth Spring on the 28th. The lowest occurred in most localities on the 28th while the highest occurred on different dates. The greatest daily range was 52° at Huttig on the 28th.

PRECIPITATION

The average precipitation for January, as determined from the records of 74 stations, was 2.68 inches which is 1.55 inches below normal. Positive departures occurred at a few southern stations and at two in the northern half of the State, negative elsewhere. Monthly totals ranged from 1.00 inch at Clinton to 5.77 inches at Springbank. The greatest amount measured in 24 consecutive hours was 2.37 inches at Portland on the 10th. Snow fell over the greater portion of the State, the average for 74 stations being 2.1 inches, amounts varying from 6.0 inches at a few northern stations to a trace at numerous southern. The average number of rainy days was 8.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c] appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction Randolph, La.; Lutherville R.F.D. No. 1, Lamar, Ark.; Springbank, Doddridge, Ark., Dam No. 1, Judsonia, Ark.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXX LITTLE ROCK, ARK., FEBRUARY, 1925 No. 2

GENERAL SUMMARY

Mild and pleasant weather, for a winter month, prevailed in Arkansas during most of February. The mean temperature was 49.3° which is 7.1° above normal, all sections showing positive departures ranging from 1.9° at Calico Rock to 11.5° at Corning. With the exception of February, 1911, when the mean temperature was 49.8°, this is the highest February mean on record. The first decade was unusually warm, daily means being 20° to 22° above normal some days and again about the 21st means were as much as 20° above normal at some stations. The closing days of the month were cold. Sunshine averaged about 61% of the possible amount, being somewhat above the February normal. The warm weather was favorable for all outdoor work. Fruit buds began developing, much plowing was done, and wheat, oats, rye, meadows, and pastures made excellent progress during the month. At the close of the month fruit was not sufficiently advanced to warrant any unusual alarm. The month was practically normal with regards precipitation. the average, 3.37 inches being only 0.09 inch above normal, Most of the precipitation fell as rain, though an appreciable amount of snow fell at 27 stations averaging 1.4 inches.

A small tornado at Mulberry, Crawford County on the 8th, did property damage estimated at $20,000. On the 22d another damaged property at Bearden, Ouachita County, and Stuttgart, Arkansas County, the total being estimated at $15,000.

W. C. H.

TEMPERATURE

The mean temperature for the month of February, 1925, as determined from the records of 51 stations, was 49.3° which is 7.1° above normal, all stations showing positive departures. Monthly means ranged from 56.0° at Huttig to 42.0° at Mammoth Spring. The highest temperature recorded during the month was 83° at Texarkana on the 21st, the lowest, 12° at Fayetteville on the 2d and 27th and at Bee Branch on the 12th. The greatest daily range was 49° at Calico Rock on the 5th.

PRECIPITATION

The month was practically normal with regards precipitation. The average, as determined from the records of 75 stations, was 3.37 inches which is 0.09 inch above normal, positive and negative deparatures occurring throughout most of the State. Monthly totals ranged from 1.04 inches at Rogers to 6.65 inches at Brinkley. The greatest amount measured in 24 consecutive hours was 2.92 inches at Brinkley on the 22d. The average number of rainy days was 6.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Thunderstorms:- 1st, 11; 2d, 6; 6th, 1; 7th, 1; 8th, 28; 10th, 1; 14th, 4; 15th, 1; 16th, 3; 17th, 2; 19th, 1; 20th, 20; 21st, 25; 22d, 40; 23d, 5; 25th, 6; 26th, 1.

Dense fog:- 24th, 1.

Solar Halos:- 9th, 1; 15th, 1; 16th, 1; 21st, 1; 24th, 1; 26th, 1.

Lunar Halos:- 7th, 1; 8th, 1; 16th, 1.

Sleet:- 10th, 1; 22d, 1; 27th, 4; 28th, 6.

Moderate Hail:- Center Point 2d; Helena, 16th. Slight damage.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and smmaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction Randolph, La.; Lutherville R.F.D. No 1, Lamar, Ark.; Springbank, Doddridge, Ark., Dam No. 1, Judsonia, Ark.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXX LITTLE ROCK, Ark., MARCH, 1925 No. 3

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during March were the positive temperature and the negative precipitation departures. The month opened with temperatures below normal, the lowest for the month occurring in most sections on either the 2d or 3d. Temperatures were again below normal for a few days about the middle of the month while during the remainder, near or somewhat above. The average precipitation, 1.69 inches, is with but three exceptions the least for this section during the month of March and at numerous stations the monthly total was the lowest on record for March. Most of the precipitation fell from the 10th to the 18th and from the 26th to the 30th and was in the form of rain, there being only three stations reporting an appreciable amount of snow. The weather was very favorable for farm work during most of the month and much more land was prepared for planting than usual. Although too dry in a few localities, in most sections the dry weather did not interfere seriously with growing crops or land preparation. The close of the month found cotton planting in progress in most southern and central sections, and corn planting nearing completetion in those sections. From rather low stages at the beginning of the month, all rivers continued to fall throughout the month, the mean stages being unusually low for the season. Although this and the preceding month were abnormally warm, vegetation was not so far advanced at the close of the month as might be expected, due doubtless to the dry weather. Killing frost on the 15th did considerable damage to peaches and plums in northwestern counties. Lightning struck a farm house near Osceola on the 13th, destroying it. On the 18th near Bee Branch a barn, feed, and three head of stock were destroyed by lightning.

W. C. H.

TEMPERATURE

The mean temperature for the month of March, as determined from the records of 51 stations, was 55.9° which is 3.3° above normal, 3 stations north of the Arkansas River and 4 south, showing negative departures, one normal, all others positive. Monthly means ranged from 50.1° at Dutton to 62.4° at El Dorado. The highest temperature recorded during the month was 89° at Batesville on the 25th and at Newport the 26th and 27th. The lowest was 7° at Eureka Springs on the 2d. The greatest daily range was 54° at Corning on the 16th.

PRECIPITATION

The average precipitation, as determined from the records of 76 stations, was 1.69 inches which is 3.01 inches below normal, all stations except Portland showing negative departures. Monthly totals ranged from 0.04 inch at Morrillton to 5.68 inches at Portland. The greatest amount measured in 24 consecutive hours was 2.50 inches at Arkansas City on the 17th. An appreciable amount of snow fell at Bentonville, Eureka Springs, and Rogers, averaging 0.3 inch. The average number of rainy days was 4

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Thunderstorms:- 8th, 1; 9th, 1; 10th, 18; 11th, 15; 12th, 10; 13th, 29; 14th, 11; 15th, 3; 16th, 3; 17th, 9; 18th, 15; 19th, 1; 24th, 1; 25th, 5; 26th, 21; 27th, 2; 29th, 3; 30th, 2; 31st, 7.

Dense fog:- 13th, 1; 17th, 1; 19th, 2.

Solar Halos:- 23d, 1; 24th, 1; 26th, 1.

Light Smoke:- 6th to 13th; 20th to 31st most sections of State.

Sleet:- 1st, 2; 28th, 1.

Moderate Hail:- 10th, Waldron, slight damage.

Heavy Hail:- 10th, Bloomer, moderate damage.

High Winds:- 18th, most sections, slight damage.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters '[a]', '[b]', appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville R.F.D. No 1, Lamar, Ark.; Springbank, Doddridge, Ark., Dam No. 1, Judsonia, Ark.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist.

. XXX LITTLE ROCK, ARK., APRIL, 1925 No. 4

GENERAL SUMMARY

pril, 1925, was marked by unusually warm dry weather. mean temperature, 67.4°, is with but one exception the est April mean on record and the average precipitation, inches, is with but three exceptions the least. The month ed with temperatures near normal and daily means con- d above normal until the last three or four days of the th when a moderate cool wave overspread the State, bring- n most sections the lowest temperature of the month, 28° g recorded at Gravette. This cool weather damaged fruit in hwestern counties and hurt cotton throughout the State. h favorable temperatures and dry weather, farm work e excellent progress throughout the month. Cotton plant- progressed rapidly in all sections of the State and by the dle of the month good stands were reported in most south- and central localities. Corn planting was practically com- d and stands were good except in some eastern and south- rn counties where practically no rain occurred. All fields clean at the close of the month, some of the cotton and t of the corn having been worked, but in most southern southeastern counties the weather was too dry for oats, lows, and pastures and the strawberry crop was seriously aged. All rivers of the State were at low stages during the th, the Arkansas at Little Rock reaching 0.2 below zero, second April with a below zero reading at Little Rock since rds have been kept.

W. C. H.

TEMPERATURE

he mean temperature for the State, as determined from the rds of 72 stations was 67.4°, or 6.2° above the normal for il. All sections showed positive departures. The highest nthly means was 74.2° at El Dorado, the lowest, 61.8° at ton, making a range in mean temperature of 9.4°. Ex- es ranged from 98° at Helena and Marked Tree on the and later dates, to 28° at Gravette on the 30th. The av- e number of days with maximum temperature of 90° or ve was 3.

PRECIPITATION

he average precipitation, as determined from the records 5 stations, was 2.62 inches which is 2.16 inches below mal. Seven stations from Mena northward reported positive artures, all others negative. Monthly totals ranged from e at Portland to 7.15 inches at Eureka Springs. The great- amount measured in 24 consecutive hours was 2.87 inches Eureka Springs on the 25th. No snowfall occurred. The av- ge number of rainy days was 6.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Thunderstorms:- 2d, 20; 3d, 29; 4th, 11; 7th, 1; 8th, 10; 9th, 15; 10th, 6; 12th, 3; 13th, 17; 14th, 15; 15th, 3; 16th, 12; 17th, 11; 18th, 5; 19th, 15; 20th, 4; 21st, 2; 22d, 1; 24th, 6; 25th, 16; 26th, 5; 27th, 21; 28th, 4.

Dense fog:- 26th, 2.

Solar Halos:- 1st, 1; 6th, 1; 25th, 1; 30th, 1.

Lunar Halos:- 1st, 1; 8th, 1.

Heavy Frost:- Rogers, 30th.

Killing Frost:- Freeman Springs, Gravette, 30th.

Moderate Hail:- Helena, 3d. Slight damage.

Heavy Hail:- Huttig, 3d. Moderate damage.

High Winds:- Most sections 27, 28, 29, 30th. Slight damage.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record; but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. ††Received too late to be included in means and summaries. Reference letters [a],[b],[c], appearing in the table indicate number of days missing; for example, [b] represents two days missing. †Also on other dates. ‡‡Post-office addresses of these stations as follows:- Junction, Randolph, La.; Lutherville R.F.D. No 1, Lamar, Ark.; Springbank, Doddridge, Ark., Dam No. 1, Judsonia, Ark.

§§ Instruments are read in the morning; the maximum temperature then read is credited to the preceding day, on which it almost always occurs.

UNAR

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist.

VOL. XXX LITTLE ROCK, ARK., MAY, 1925 No. 5

GENERAL SUMMARY

The dry weather which characterized the year 1924 continues thus far into 1925. The average precipitation for May was 1.88 inches which is, with the exception of May, 1911 when the average was only 1.11 inches, the least on record for this month. The total precipitation for the State from January 1st to May 31st, 1925 has been 12.24 inches which is 9.87 inches less than normal. Arkansas' climatological history dates from January 1st, 1891 and during the 35 years elapsed since that time, the present year has thus far been the driest on record. For the three spring months, March, April, and May, the total, 6.19 inches, is the least on record, this total being 2.95 inches less than the previous dry spring of 1916.

Arkansas experienced a wide range in temperature during the month, 102° at Helena on the 30th equaling the highest on record for May and 26° at Dutton on the 1st being within 2° of the lowest on record. There were two distinctly cold periods during the month, one at the opening and the other the 25th and 26th. During the latter period near record low temperatures for so late in the spring were recorded at numerous stations. Killing frost occurred at a few northwestern stations on the 1st and 2d, but damage was slight.

Although the weather was too dry for corn, oats, meadows, and pastures, the cotton crop made excellent progress except in some north central and northeastern sections where some seed did not germinate promptly owing to the dry weather. At the close of the month chopping was well along throughout the State. Farm work was ahead of the average season. All streams were at low stages during the month, the Arkansas at Little Rock reaching the lowest May stage on record.

A hail storm struck a small section west and north of Rogers on the 13th doing considerable damage over an area about two miles wide and four miles long. Gardens, strawberries, and orchards suffered considerably. On the 17th a section one half mile wide and one mile long near Arkadelphia was struck by a heavy hail storm. The ice pellets were small but fell very thick and in places were piled ten inches deep. In this section all crops were ruined. W. C. H.

TEMPERATURE

The mean temperature, as determined from the records of 54 stations, was 68.0°, or 1.2° below normel, practically all sections showing negative departures. The highest monthly mean temperature was 71.7° at El Dorado, the lowest 61.9° at Dutton, making a range in mean temperature between the northwestern and southern sections of the State of 9.8°. Extremes ranged from 26° at Dutton on the 1st to 102° at Helena on the 30th. The average number of days with maximum temperature of 90° or above was 7.

PRECIPITATION

The average precipitation, as determined from the records of 80 stations, was 1.88 inches which is 3.24 inches below normal, all stations for which normals have been computed showing negative departures except Rison. Monthly totals ranged from 0.25 inch at Searcy to 5.58 inches at Yancopin. The greatest amount measured in 24 consecutive hours was 3.71 inches at Yancopin on the 11th. The average number of rainy days was 4.

CORRECTION

Mena June 30, 1924. Maximum temperature should be 76. Minimum should be 62. Precipitation should be 0.90 inch. Monthly mean maximum should be 80.8. Monthly mean minimum should be 68.0. Monthly mean temperature should be 78.9. Departure from normal temperature should be + 2.5. Monthly precipitation total should be 3.57 inches. Departure from normal precipitation should be — 1.27 inches. Number of rainy days should be 8. Annual precipitation total should be 33.35 inches. Departure from normal annual precipition should be — 16.93. Annual number of rainy days should be 90.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Thunderstorms:- 3d, 2; 4th, 2; 8th, 1; 9th, 15; 10th, 12; 11th, 4; 13th, 22; 14th, 4; 15th, 3; 16th, 11; 17th, 3; 20th, 3; 21st, 6; 22d, 1; 23d, 10; 24th, 20; 26th, 1; 28th, 1; 30th, 13; 31st, 2.

Dense fog:- 10th, 3; 14th, 1; 19th 1.

Solar Halos:- 2d, 1; 5th, 1; 7th, 1; 13th, 1; 27th, 2; 31st, 1.

Lunar Halos:- 2d, 1; 17th, 1.

Killing Frost:- Eureka Springs, Gravette, Mount Ida, 1st; Dutton, Pindall, 1st and 2d.

Heavy Hail:- Rogers 13th; Arkadelphia, 17th. Considerable damage.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXX LITTLE ROCK, ARK., JUNE, 1925 No. 6

GENERAL SUMMARY

The dry weather which characterized the preceding five months of this year continued through June, the average precipitation, 2.08 inches, being about 50% of the normal amount, making this the driest June since 1914 when the average was only 1.00 inch. This was also the warmest June since 1914, the mean temperature for each month being 82.3° which is the highest on record.

The total precipitation for the State from Jan. 1. 1925, to June 30, 1925, has been 14.32 inches which is 11.87 inches less than normal. Although for the State as a whole the month was unusually dry, some sections in southwestern, northern, and northwestern portions had abundant rains fairly well distributed through the month, but in many eastern and southern counties the drought continued severe, cotton being damaged somewhat and all other crops seriously, corn, meadows, and pastures being practically ruined in some counties. In other sections cotton made good to excellent progress, fields were clean, and at the close of the month squares and blooms were plentiful. Very few weevil were reported. Rice is good where irrigated, but there are reports of low water in the wells, making pumping expensive.

Temperatures were above normal in practically all sections except on the 25th and 26th when a cool wave brought night temperatures somewhat below the seasonal average. The highest temperature recorded, 108°, lacks 2° of equalling the previous high record for this month.

All streams continued at low stages during the month, the Arkansas at Little Rock reaching a stage of 0.7 foot below zero, this being the first below zero reading recorded during June. There were no destructive hail or wind storms reported during the month.

W. C. H.

TEMPERATURE

The mean temperature, as determined from the records of 55 stations was 82.3° which is 5.5° above normal, all sections of the State showing positive departures. The highest monthly mean temperature was 85.5° at Pine Bluff, the lowest, 76.2° at Dutton, making a range in mean temperature between the northwestern and southeastern sections of 9.3°. The highest temperature recorded was 108° at Helena on the 20th, the lowest, 46° at Corning on the 1st and at Dutton on the 26th. The average number of days with maximum temperature of 100° or higher was 6.

PRECIPITATION

The average precipitation for the month of June, as determined from the records of 83 stations, was 2.08 inches which is 2.00 inches less than normal. The geographical distribution was somewhat irregular, but generally speaking the stations along the Mississippi, in the lower Arkansas Valley, and in the southern border counties showed monthly totals less than an inch, while in the southwestern and northern border counties four to six inches was measured at several stations. Monthly totals ranged from 6.66 inches at Grannis to 0.12 inch at ~~Port-land~~. The greatest amount measured in 24 consecutive hours was 5.43 inches at Grannis on the 13th. The average number of rainy days was 4.

VOL. XXX LITTLE ROCK, ARK., JULY, 1925 NO. 7

GENERAL SUMMARY

The drought which characterized the first six months of the year 1925 was broken by moderate to rather heavy rains during July. The average precipitation for the month, 4.99 inches, was 1.07 inches above normal, this being the first positive departure of as much as an inch since December, 1923. In a few localities the monthly totals were very light for July while in others, amounts exceeding ten inches were measured.

The month opened warm, about 6° above normal, and temperatures continued above during the first 15 days. A cool wave overspread the State from the 18th to the 23d during which temperatures were somewhat below normal and from the 28th to the 31st another cool wave brought the lowest temperature of the month, 47° being recorded at Gravette.

Although the precipitation total for the year now averages 10.80 inches below normal, nevertheless the rains of July were very beneficial and in most sections damage from the drought is not so real as indicated a month ago. Early corn was damaged seriously, but late corn made very good progress during the month and a good yield is assurred in many localities. Rice, meadows, pastures, potatoes, fruit, and forage crops improved rapidly since the rains. Conditions continued favorable for cotton, damage from worms and weevil being slight, and at the close of the month the crop was in excellent condition and opening in the southern counties.

There were no destructive hail or wind storms reported during the month. Sunshine averaged about 62% of the possible amount, this being somewhat below the July average. The number of clear days was slightly below and the number of cloudy and rainy days correspondingly above the average. Thunderstorms occurred in some portions of the State every day during the month. The streams of the State continued at low stages.

W. C. H.

TEMPERATURE

The mean temperature, as determined from the records of 52 stations, was 81.8° which is 1.9° above normal, all stations except Bentonville, Dutton, Ozark, and Pocahontas showing positive departures. The highest monthly mean temperature was 85.0° at Huttig and Helena, the lowest, 74.2° at Dutton, making the range in temperature over 10° between the northwestern and the southern and southeastern sections of the State. Extremes ranged from 109° at Helena on the 16th to 47° at Gravette on the 31st. The average number of days with maximum temperature 100° or above was 6.

PRECIPITATION

The average precipitation, as determined from the records of 80 stations, was 4.99 inches which is 1.07 inches above normal. Negative departures were recorded in Washington and Benton counties and at a number of stations in the eastern counties, positive elsewhere. Monthly totals ranged from 10.41 inches at Grannis to 0.59 inch at Corning. The greatest amount measured in 24 consecutive hours was 5.04 inches at Waldron on the 21st-22d. The average number of rainy days was 10.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXX LITTLE ROCK, ARK., AUGUST, 1925 No. 8

GENERAL SUMMARY

The month opened unseasonably cool, temperatures being about 11° below normal and continued near or somewhat below during the first week, with 47° recorded at Dutton on the 1st. There was another cool period about the 21st to 24th when temperatures were slightly below normal, but during the remainder of the month daily means were generally somewhat above normal. Precipitation was light, the monthly totals averaging about 47% of the normal. The annual deficiency up to August 31st is 12.82 inches. Despite the fact that July's precipitation total was 1.07 inches above normal the State as a whole was very dry at the close of August, all streams being near record low stages and stock water scarce in many localities.

The weather during the first three weeks of the month was generally favorable for crops. Cotton continued to make good progress. Boll weevil infestation was light in most sections and the damage not serious. In the uplands there was some shedding but this did not reach serious proportions until during the last week of the month when hot winds damaged the crop seriously over a large section of the State. Much of the August crop dropped off, the plants ceased blooming, and in some sections bolls began opening prematurely. At the close of the month picking was general throughout the State. Late corn was badly injured except in a few localities in the northwest where rainfall was more abundant. Meadows, pastures, and vegetables deteriorated rapidly the last week. Rice was doing moderately well and some had been harvested at the close of the month.

W. C. H.

TEMPERATURE

The mean temperature for the month of August, as determined from the records of 53 stations, was 80.3° which is 0.9° above normal. Negative departures were recorded at four stations south of the Arkansas River and at several north, but positive departures prevailed in most sections. Monthly means ranged from 73.2° at Dutton to 84.6° at Junction, a difference of 11.4° between the temperature of the mountains in the northwest and the southern border. The highest temperature recorded was 108° at Helena and Pine Bluff on the 19th and later dates. The lowest was 47° at Dutton the 1st. Extremes occurred near these dates in most sections. The greatest daily range was 48° at Calico Rock on the 29th.

PRECIPITATION

The average precipitation, as determined from the records of 81 stations, was 1.81 inches which is 2.02 inches below normal, all stations except Booneville, Corning, Gravette, Marshall, and Ozark showing negative departures. Monthly totals ranged from 7.14 inches at Marshall to none at Amity and Whitecliffs. The greatest amount measured in 24 consecutive hours was 2.80 inches at Ozark on the 8th. The average number of rainy days was 4.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

. XXX LITTLE ROCK, ARK., SEPTEMBER, 1925 No. 9

GENERAL SUMMARY

he month of September, 1925, was marked by unusually
day temperatures and high monthly means throughout
State. The mean temperature for the State was 80.5° which
e highest September mean on record, 0.2° above the August
n this year, and 0.9° above the previous warm September
921. Helena recorded a temperature of 113° on the 6th
ch is the highest temperature on record for September,
at Conway on September 3, 1899, being the previous high
ember temperature. With the exception of a few days a-
the 11th to the 15th and again from the 24th to the 26th
temperature was above normal throughout the month with
ima 100° to 113° at numerous stations from the 1st to the
h.

here was practically no rain during the first decade, but
n the 11th to the 15th and from the 22d to the 28th show-
were frequent. The average precipitation for the State was
siderably above normal, all stations in the upper Arkansas
ley and the northern counties showing positive departures,
le there were lighter totals in numerous eastern and south-
localities.

he weather for the month as a whole was unfavorable for
st crops. The extremly high temperatures which charac-
zed the first of the month caused cotton to deteriorate over
greater portion of the State and much of it opened prema-
ely. Practically all growth was stopped and in many sections
top crop matured. The rains the latter portion of the month
ayed picking and the continued warm weather caused some
d to sprout in the boll. It was also too wet for corn and rice
rvest and rice especially was damaged. Conditions at the
se of the month were favorable for meadows, pastures, truck,
d fruit and for the preparation of the soil for sowing wheat,
s and rye.

All rivers of the State were at low stages until late in the
nth when heavy rains brought moderately high stages in
e White, Red, and Little Red. The Arkansas at Little Rock,
e White at Batesville, and the Ouachita at Arkadelphia
ached record low stages.

W. C. H.

TEMPERATURE

The mean temperature for the month of September, as de-
rmined from the records of 54 stations, was 80.5° which is
6° above normal, all stations showing positive departures.
onthly means ranged from 72.5° at Dutton to 85.2° at Hel-
na, a difference of 12.7° between the mountains of the north-
est and the lowlands along the Mississippi. The highest tem-
erature recorded was 113° at Helena on the 6th, the lowest,
7° at Harrison on the 12th. The highest occurred in all sec-
ons of the State during the first decade, the lowest in most
ections from the 12th to the 14th or from the 23d to the 26th.

Late report, August, 1925: Huttig, Mean temperature 81.9°.
Total precipitation 3.00 inches.

PRECIPITATION

The average precipitation, as determined from the records of 77 stations, was 5.96 inches which is 2.63 inches above normal. Several negative departures occurred in White County and from Lee and Phillips counties southwestward, positive elsewhere. Monthly totals ranged from 15.61 inches at Lutherville to 0.58 inch at Princeton. The greatest amount measured in 24 consecutive hours was 4.60 inches at Arlberg on the 15th. The average number of rainy days was 7.

VOL. XXX LITTLE ROCK, ARK., OCTOBER, 1925 No. 10

GENERAL SUMMARY

If the weather of October, 1925, is compared with that of October, 1924, quite a contrast is found. During October, 1924, the precipitation averaged only 0.29 inch, being the driest October on record while October, 1925, with the exception of 1919, is the wettest on record. In 1924 the greatest monthly total was 2.13 inches. In 1925 the least monthly total was 3.57 inches. The temperature during October, 1924, averaged 2.6° above normal, this year, 3.6° below normal. In 1924 only two stations reported a monthly mean below normal, this year only one above.

The month opened with temperatures above normal and daily means were generally above during the first week or ten days, thereafter generally below normal until about the 28th when abnormally cold weather overspread the State, the lowest temperatures on record for so early in the fall being recorded at several stations. Killing frost or freezing temperatures occurred in practically the entire State from the 28th to the 31st, but damage was not large, most crops being matured.

Rains occurred at frequent intervals from the 1st to the 17th and from the 24th to the 30th. Amounts from the 12th to the 17th were heavy and all streams of the State reached moderately high stages, the Black, White, Cache, Little Red, and Petit Jean passing flood stages at several points. Much of the crops had not been gathered and considerable damage occurred in the lowlands, a conservative estimate of the total loss being $185,000.

The weather during the month was very unfavorable for harvesting. At the first of the month cotton was sprouting in the boll in some localities and while the cooler weather stopped the sprouting the continued rains prevented picking and at the close of the month much still remained in the fields, a part of which will not be worth picking. Much corn was also damaged. Late potatoes, sweet potatoes, and truck were frosted in many places, but this loss will not be large. Rice harvest was delayed by wet ground. Dirt roads were in bad condition most of the month.

W. C. H.

TEMPERATURE

The mean temperature for the month of October, as determined from the records of 56 stations, was 58.8° which is 3.6° below normal, Portland being the only station with a positive departure. Monthly means ranged from 65.4° at Portland to 51.8° at Mammoth Spring, a difference of 13.6° between southeastern and extreme northern portions of the State. The highest temperature recorded was 98° at Dardanelle on the 1st and Dumas on the 4th. The lowest was 13° at Dutton on the 31st. Extremes approximated these dates throughout the State. The greatest daily range was 55° at Grannis on the 21st.

PRECIPITATION

The average precipitation, as determined from the records of 83 stations, was 7.73 inches which is 4.73 inches above normal, all sections showing positive departures. Monthly totals ranged from 13.89 inches at Clinton to 3.57 inches at Prescott. The greatest amount measured in 24 consecutive hours was 4.12 inches at Freeman Springs on the 8th. An appreciable amount of snow fell at 13 stations, averaging 0.7 inch.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Thunderstorms:- 1st, 13; 4th, 22; 5th, 4; 6th, 4; 7th, 20; 8th, 16; 11th, 1; 12th, 14; 13th, 1; 14th, 12; 15th, 16; 16th, 22; 23d, 11; 24th, 7; 29th, 1; 30th, 1.

Sleet:- 29th, 8; 30th, 10.

Dense Fog:- 2d, 2; 13th, 5; 14, 1; 22d, 1; 23d, 4; 24th, 2.

Killing Frost:- Killing frost or freezing temperature most localities 29th or 30th.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

Vol. XXX Little Rock, Ark., November, 1925 No. 11

GENERAL SUMMARY

Although the monthly mean temperature for November averaged 1.1° below normal, the month was much more favorable for harvesting and other farm work than October. After the first week, showers occurred at less frequent intervals and with dry winds prevailing, much cotton was picked and corn gathered. The rice harvest continued, but the showers interfered more with rice harvesting than with cotton picking. The weather was very favorable for wheat, oats, rye, meadows, pastures, and winter truck, all of which were in good condition at the close of the month.

There were three cold periods during the month, the minima occurring about the 1st, 9th, and 23d. On the latter date freezing temperatures occurred in all sections of the State.

During the 4th and 5th of November, while a moderate barometric depression was moving from Utah and Colorado northeastward to the upper Lakes, unusually heavy rains fell in southern and southeastern Arkansas, six to ten inches being measured at numerous stations. Considerable damage resulted in some localities, but fortunately most crops in the southern counties were already harvested and the loss was correspondingly reduced.

On November 26th at 2:30 p. m. a tornado occurred at Blytheville, Mississippi County. This storm moved from west to east a distance of ten miles over a path 100 feet wide and destroyed buildings, the loss being estimated at $4,000. One person was injured, but none were killed. W. C. H.

TEMPERATURE

The monthly mean temperature for November, as determined from the records of 56 stations, was 50.4° which is 1.1° below normal, seven scattered stations showing positive departures, all others negative. Monthly means ranged from 54.4° at Portland to 43.9° at Mammoth Spring, a difference of 10.5° in temperature between the southeastern and northern portions of the State. The highest trmperature recorded was 89° at Jonesboro on the 12th, the lowest, 15° at Dutton on the 25th and 29th. The highest occurred in most sections about the 12th or 13th and the lowest about the 9th or the 23d. The greatest daily range was 55° at Grannis on the 24th.

PRECIPITATION

The average precipitation for November, as determined from the records of 84 stations, was 5.67 inches which is 2.10 inches above normal, 15 stations showing negative departures. The monthly amounts at all other stations for which averages have been computed were normal or above. Monthly totals ranged from 14.41 inches at Huttig to 1.04 inches at Fayetteville. The heaviest totals were in the southern counties, the lighter in the northwestern. The greatest amount measured in 24 consecutive hours was 6.17 inches at Yancopin on the 5th. Eureka Springs reported 0.2 inch of sleet, Mammoth Spring a trace of snow, and Bentonville 0.3 inch of snow. All other precipitation fell as rain. The average number of rainy days was 8.

Additional reports for November, 1925; Evening Shade, Mean temperature, 48.8°; Index, total precipitation, 4.78 inches; Lambrook, Mean temperature, 49.4°; Ozark, Mean temperature, 47.8°; Total precipitation, 3.78; Thornburg, Mean temperature 50.4°.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

CLIMATOLOGICAL DATA

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXX LITTLE ROCK, Ark., DECEMBER, 1925 No. 12

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during December were the low monthly mean temperatures and the light precipitation. This was the coldest December since 1917 and also the driest.

During the first half of the month temperatures were generally near or somewhat above the seasonal average, but after the 15th daily means were almost uniformly below normal, the coldest weather of the month occurring during the last decade when a cold wave overspread the State giving low temperatures in all sections with zero to 6° below at several northern stations.

There was an average of only three rainy days during the month, rain occurring in most sections on the 4th, the 13th, and the 14th, and at several stations about the 22d. The monthly total has been less during only three Decembers of the past 35 years. The streams of the State were at correspondingly low stages during most of the month.

The weather was generally favorable for all farm and outdoor work, cotton picking, ginning, and rice threshing being nearly completed at the close of the month. Winter grains were in good condition, but the acreage small. Dirt roads were in good condition throughout the month.

A tornado occurred near Marshall, Searcy County, 11:00 p. m. of the 3d. This storm moved from southwest to northeast over a path about 150 feet wide for a distance of more than five miles. The damage to dwellings and barns is estimated at at $3,500. No stock were killed or people injured. W. C. B.

TEMPERATURE

The monthly mean temperature for December, as determined from the records of 57 stations, was 40.2° which is 1.9° below normal, all stations except Corning, Marianna, and Subiaco showing negative departures. Monthly means ranged from 48.8° at Magnolia to 33.1° at Dodd City, a difference of 15.7° between the northern and southern border counties. The highest temperature recorded was 81° at Jonesboro on the 8th, the lowest, —6° at Mammoth Spring on the 28th. The lowest occurred in practically all sections on the 28th, the highest on different dates. The greatest daily range was 51° at Lambrook on the 26th.

PRECIPITATION

The average precipitation, as determined from the records of 80 stations, was 1.71 inches which is 2.38 inches below normal, all stations except El Dorado and Junction showing negative departures. Monthly totals ranged from 5.10 inches at El Dorado to 0.13 inch at Rogers. An appreciable amount of snow fell at 31 stations and averaged 0.7 inch. Amounts were unevenly distributed, ranging from 3.6 inches at Corning and 3.5 inches at Thornburg to a trace at numerous southern stations. The average number of days with 0.01 inch or more precipitation was 3

Correction October 1925: Calico Rock highest temperature on 4th. Eureka Springs clear days 12, partly cloudy 8, cloudy 11. Evening Shade mean temperature 57.0°, precipitation 28th trace. Harrison highest temperature on 2d. Lutherville 12 clear days, 3 partly cloudy, 16 cloudy. Mammoth Spring lowest temperature 20° on 19th, rainy days 14. Pindall clear days 14, partly cloudy 2, cloudy 16. Waldron clear days 9, partly cloudy 6, cloudy 16. Waters clear days 12, partly cloudy 4, cloudy 15.

Correction November 1925: Hot Springs highest temperature 75° on 12th. Mountain Home, mean temperature 47.4° departure — 2.2°. Ozark, mean maximum 63.0°; mean minimum 36.2°; mean 49.6°; departure — 2.6°.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Thunderstorms:- 2d, 1; 3d, 10; 4th, 17; 19th, 1; 24th, 1.

Sleet:- 4th, 2; 20th, 1.

Dense Fog:- 14th, 2.

Solar Halos:- 7th, 2; 19th, 2; 31st, 2.

Lunar Halos:- 2d, 2; 28th, 2; 31st, 2.

Tornado:- Marshall, 3d.

Moderate Hail:- Fort Smith 3d, Ozark 4th, Marshall 4th, Evening Shade 2d, loss $500, Freeman Springs 3d, Higden 4th.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

HARVEY S. COLE, Metorologist

VOL. XXX LITTLE ROCK, ARK, YEAR 1925 No. 13

GENERAL SUMMARY

The dry weather which characterized the year 1924 continued through 1925, and while the annual amount does not show so great a departure from the normal as occurred in 1924, the first six months of the year were the driest of any year since state wide records have been kept in Arkansas. During the period from January 1st to June 30th the average precipitation for the State was only 14.32 inches, which is 11.87 inches below normal and approximately three inches less than ever previously measured during the same months.

Normally Arkansas recieves considerably more than 50% of the annual rainfall during the first six months of the year, May being the wettest month and October the driest, but in 1925 May was the driest month of the year and with one exception the driest on record, while October was the wettest of the year and with but one exception the wettest on record. Approximately one third of the annual precipitation occurred during the first six months of the year and two thirds during the latter.

As is often the case during years with deficient rainfall, the temperature averaged considerably above normal. January was practically normal with regards temperature, but February, March, and April were unusually warm. Vegetation started growing early and fruit was damaged in northwestern counties by frost and freezing weather near the middle of March. All farm work started early in the spring and continued unabated, crops being planted, cultivated, and matured much in advance of the average year. May was cool, but June, July, August, and September were warm. October, November, and December were cold, the coldest weather of the year occurring in most sections of the State on December 28th, but the low means of the last three nonths did not offset the excess in temperature previously accumulated and the year closed with an annual mean of 63.0° or 2° above normal, 1925 being next to the warmest year on record.

Although the dry weather of the spring interfered somewhat with the preparation of land for planting and serioulsy damaged corn, strawberries, meadows, and pastures, the cotton crop did not suffer; in fact the dry weather kept grass from growing so rapidly as it usually does and farmers were able to keep clean and well cultivated an unusually large acreage of cotton at a much less expense than is necessary during a spring and summer of average rainfall. The hot, dry weather also held boll weevil in check and damage from weevil and worms was not large during 1925.

The weather during the fall months was almost disastrous for the farmers in Arkansas. Early in September an unprecedented heat wave caused cotton to shed and open prematurely and with the acreage and production above normal, labor scarce, and rainfall near the heaviest on record, picking cotton and harvesting rice soon became matters of serious import. The rains continued, cotton sprouted in the boll and rice in the shock, cotton bolls rotted, and in some sections in order to get the cotton crop out of the field it became necessary to gather and thresh the bolls. When the crop was ready for market the quality was inferior and the price low.

W. C. H.

WEATHER BY MONTHS

January:- Moderate winter weather prevailed during the first two decades of January with colder weather the last week of the month, temperatures being somewhat below zero at a few northern and northeastern stations and 18° to 20° to the southern border. Frequent freezing and thawing weather damaged oats in some localities, but snow which fell the latter part of the month remained on the ground for a few days in northern counties, making conditions more favorable. Rainfall was deficient, the soil being too dry for plowing in some southern counties.

February:- With but one exception this was the warmest February on record in Arkansas. The mean temperature was 7.1° above normal, the first decade being unusually warm, temperatures 20° to 22° above normal being of common occurence. The warm weather was favorable for all outdoor work. Fruit buds began developing, much plowing was done and wheat, oats, rye, meadows, and pastures made excellent progress throughout the month.

March:- March was warm and dry. With the exception of a few days the first of the month and again about the middle, temperatures were almost continually above normal. The average precipitation was 1.69 inches which is with but three exceptions the least for this section during the month of March and at numerous stations the monthly totals were the lowest on record for March. The weather was very favorable for farm work except too dry in some southern localities. The close of the month found cotton planting in progres and corn planting nearing completion in most southern and central sections. Killing frost on the 15th damaged peaches and plums in the northwestern counties.

April:- Like the preceding month, April was warm and dry, the mean temperature being near the highest April mean on record and the average precipitation near the least. The last three or four days of the month were cold, a temperature of 28° being recorded at Gravette. This cool weather damaged fruit and hurt cotton. Farm work made excellent progress throughout the month, cotton planting progressing rapidly and by the middle of the month good stands were reported in most southern and central sections. Corn planting was practically completed. All fields were clean at the close of the month, but in southern and southeastern counties the weather was too dry for oats, meadows, and pastures, and the strawberry crop was seriously damaged.

May:- The dry weather which characterized the first four months of the year continued through May, the May average being one of the least on record. The State experienced a wide range in temperature during the month, 102° at Helena on the 30th equalling the highest on record for May and 26° at Dutton on the 1st being within 2° of the lowest. Although the weather was too dry for corn, oats, meadows, and pastures, the cotton crop made excellent progress except in a few localities where it was too dry for germination. At the close of the month cotton chopping was well along throughout the State and all farm work ahead of the average season.

June:-During June the rainfall was only 50% of the normal amount and the temperature averaged 5.5° above normal, this being one of the warmest Junes on record. Abundant rains fell in some southwestern, northern, and northwestern localities, but in many eastern and southern counties the drought continued severe. Cotton was damaged slightly in the southeast and all other crops seriously. Elsewhere cotton made good to ex-

MAR 15 1926

cellent progress, fields were clean, and at the close of the month squares and blooms were plentiful. Very few weevil were reported. Rice was in good condition where irrigated, but water in the wells was low, making pumping expensive. All streams of the State continued at low stages during the month.

July:- The drought which characterized the first six months of the year was broken by moderate rains during July, however the geographical distribution of the July rains was very irregular, Corning reporting only 0.59 inch while Grannis measured 10.41 inches. These rains were very beneficial and while early corn was seriously in some sections, late corn made very good progress and other crops improved rapidly following the rains. Conditions continued favorable for cotton, damage from weevil and worms being slight, and at the close of the month the crop was in excellent condition and bolls were opening in the southern counties.

August:- Precipitation was light during August, less than 50% of the normal rainfall occurring, and despite the fact that July's precipitation was over an inch above normal the State as a whole was very dry at the close of the month. The weather during the first three weeks of the month was favorable for all crops, but during the last week hot winds damaged the cotton crop seriously. Much of the August crop dropped off, the plants stopped blooming, and in some sections bolls began opening prematurely. Late corn was badly injured except in a few northwestern localities where rainfall was more abundant.

September:- September was marked by unusually high day temperatures and high monthly means. The mean temperature for the State was 80.5° which is the highest September mean on record, and 113° at Helena on the 6th is the highest temperature on record for the month. The weather for the month was unfavorable for most crops. The extremely high day temperatures of the first decade caused much cotton to open prematurely and the rains the latter portion of the month delayed picking. The warm rainy weather caused some seed to sprout in the boll.

October:- The month was one of the coldest and wettest on record, precipitation averaging 4.73 inches above normal and temperatures 3.6° below. Killing frosts or freezing temperature occurred in practically all portions of the State on the 28th, 13° being recorded at Dutton on the 31st. The heavy rains brought all streams to moderately high stages and considerable damage resulted in the lowlands, a conservative estimate of the loss from high water being $185,000. As a whole the month was very unfavorable for harvesting.

November:- November was more favorable for harvesting than October. After the first week showers were less frequent and much cotton was picked and corn gathered. Rice harvesting was delayed more by the rains than cotton picking. Six to ten inches of rain fell in southern and southeastern counties on the 4th and 5th of November. Considerable damage resulted, but fortunately most crops in that section of the State were already harvested and the loss was correspondingly reduced.

December:- The first half of the month was warm, but during the latter half daily means were almost uniformly below normal. A cold wave occurred on the 28th giving temperatures zero to 6° below at several northern stations and 13° to the southern border, the lowest temperatures of the year occurring at most stations. There were only three rainy days during the month and the monthly total precipitation was one of the least on record. The weather was generally favorable for all farm and outdoor work, cotton picking, ginning, and rice threshing being nearly completed at the close of the month. Winter grains were in good condition, but the acreage small.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record: but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. Reference letters [a], [b], [c], appearing in the table indicate number of days missing: for example, [b] represents two days missing. † Also on later dates. ‡‡ Post-office addresses of these stations as follows:- Dam No. 1, Judsonia, Ark., Junction, Lillie, La.; Lutherville R. F. D. No. 1, Lamar, Ark. Springbank, Doddridge, Ark. ‖31 days missing.

CORRECTIONS 1925

General Table

January: Mean temperature departure for State should be 0.1.
February: Malvern, mean temperature should be 51.2
March: Hope, mean temperature should be 57.2a.
March: Mammoth Spring, precipitation departure should be + 3.43.
May: Fort Smith, mean temperature should be 68.4.
May: Hope, temperature departure should be 2.3.
June: Brinkley, temperature departure should be + 6.2
June: Jonesboro, precipitation departure should be 2.39.
July: Hot Springs, precipitation departure should be + 1.92.
July: Searcy, mean temperature should be 81.1.
July: Texarkana, precipitation departure should be +1.67.
August: Bentonville, temperature departure should be 0.8.
September: Bentonville, temperature, departure should be 6.7.
October: Evening Shade, mean temperature should be 57.0.

Comparative Data Table

September: Average precipitation should be 5.96 inches.

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
ARKANSAS SECTION.
HARVEY S. COLE, Metorologist
VOL. XXXI LITTLE ROCK, ARK., JANUARY, 1926 No. 1

GENERAL SUMMARY

There were no unusual features of Arkansas' weather during January. The temperature averaged 0.6° below normal and the precipitation 0.59 inch above normal, all extremes being well within the limits established by previous records. There were two cold periods during the month, from the 7th to the 14th, and from the 21st to the 26th. During the remainder of the month temperatures were generally somewhat above normal. Much of the precipitation on the 21st and 22nd fell as snow in northern and central sections of the State and in some northern localities remained on the ground five or six days. The melting snow and locally heavy rains caused the smaller streams to reach moderately high stages, the Black, Ouachita, Little Red, Cache, and Petit Jean reaching flood stages. The weather as a whole was favorable for outdoor work. Some cotton was still in the fields the first of the month and most of this was picked during January, the amount remaining unpicked at the close of the month being small and of such quality as to hardly justify picking. Rice harvest was completed and the crop threshed. The weather was favorable for winter grains, all being in good condition at the close of the month. Some spring plowing was done in southern counties. There were no destructive hail or wind storms reported. W.C.H.

TEMPERATURE

The monthly mean temperature for January, as determined from the records of 56 stations, was 40.5° which is 0.6° below normal. Positive departures occurred in northeastern sections of the State and from Yell County westward, negative prevailing elsewhere. Monthly means ranged from 46.0° at Magnolia to 33.2° at Mammoth Spring, a difference of 12.8° between northern and southern border counties. The highest temperature recorded was 77° at Booneville on the 20th, the lowest, 17° below zero at Harrison on the 23rd. Extremes occurred on approximately these dates throughout the State. The greatest daily range was 50° at Harrison on the 23rd.

PRECIPITATION

The average precipitation for 84 stations was 4.69 inches which is 0.59 inch above the average of the past 35 years. Monthly totals ranged from 9.18 inches at Corning to 1.87 inches at Mountain Home. Monthly amounts were unevenly distributed, positive and negative departures occuring throughout the State. An appreciable amount of snow fell at 57 stations and averaged 3.7 inches. The greatest depth measured was 16.5 inches at Gilbert, Searcy County. The average number of days with 0.01 inch or more precipitation was 7.

VOL. XXXI LITTLE ROCK, ARK., FEBRUARY, 1926 No. 2

GENERAL SUMMARY

Temperatures were below normal on about six days during February, normal or above during the remainder of the month, positive departures of 10° to 20° occuring from the 6th to the 8th and on the 13th and 21st. No unusually low temperatures occurred, but 88° at Huttig on the 7th is within 5° of the highest on record for this month. The monthly mean, 48.5°, lacks nearly a degree of being as high as the mean for February, 1925, which was the highest February mean on record. The temperature for the three winter months amounts to an excess of 3.2°, December's mean being 1.9° below normal, January's 0.6° below, and February's 5.7° above. Precipitation was light, averaging only 60% of the normal amount with only four rainy days during the month. The mild dry weather was favorable for all outdoor work. The greater portion of the oat crop was sown during the month and preparation made for planting corn, cotton, and rice. Potatoes, truck crops, and gardens were planted in southern and central sections and winter grains made excellent progress throughout the month. Peaches, plums, and pears were blooming in southern counties at the close of the month and buds swelling in the northern counties.

On the evening of the 24th high winds (straight blows) were reported throughout the State. An accurate estimate of the total damage cannot be made, but would probably be several thousand dollars. A tornado occurred about 8:00 p. m. of the 24th six miles south of Lake Village, Chicot County. This storm moved from southwest to northeast over a path 100 yards wide for a distance of about three miles before crossing the Mississippi River. Five persons were killed and fifteen injured in Arkansas. Property damage in Chicot County amounted to about $70,000. Considerable damage and some loss of life were caused by the same storm in Mississippi. W.C.H.

TEMPERATURE

The mean temperature for February, as determined from the records of 57 stations, was 48.5°, which is 5.7° above normal, all stations for which normals have been computed showing positive departures. Monthly means ranged from 42.3° at Mammoth Spring to 58.9° at Warren, a difference of 16.6° between the northern and southern counties. Extremes ranged from 88° at Huttig on the 7th to 10° at Gravette on the 19th. The greatest daily range was 51° at Huttig on the 6th.

PRECIPITATION

The average precipitation for the State, as determined from the records of 82 stations, was 2.02 inches which is 1.33 inches below normal, Mammoth Spring being the only station showing a positive departure. Monthly totals ranged from 0.61 inch at Fayetteville to 3.52 inches at Little Rock. A measurable amount of snow fell at 26 stations averaging 1.0 inch. Snowfall totals ranged from 3.0 inches at Corning to a trace at numerous stations. The average number of days with 0.01 inch or more precipitation was 4.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Thunderstorms:—2d, 1; 8th, 1; 13th, 2; 17th, 18; 18th, 18; 21st, 1; 24th, 25; 25th, 4; 26th, 1.
Sleet:—4th, 3; 18th, 3; 25th, 1.
Solar Halos:—1st, 1; 5th, 1; 9th, 1; 16th, 1; 21st, 1.
Lunar Halos:—4th, 1; 20th, 1; 21st, 2; 22nd, 1; 28th, 1.
Dense Fog:—1st, 1; 3rd, 1; 4th, 1.
Light Hail:—Center Point, Fort Smith, Pine Bluff, 17th; Gravette, 18th.
High Winds:—Throughout State 24th.

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU.
ARKANSAS SECTION.
HARVEY S. COLE, Metorologist
VOL. XXXI LITTLE ROCK, ARK., MARCH, 1926 No. 3

GENERAL SUMMARY

The weather during March was damp and disagreeable, the temperature for the State averaging 48.5°, the same as during February. The average deficiency in temperature for the State was 4.2°, but numerous individual stations were 8° colder than normal. Unusually low temperatures did not occur, but daily means were normal on only about eight days during the month and daily means 15° to 18° below normal were of frequent occurrence. February was a warmer month at many stations than March and the lowest for the month is only a degree higher than the lowest for February. During the first five days there was practically no rain, but thereafter light to moderate showers were of almost daily occurrence. These showers were not sufficiently heavy to materially increase stream flow, but kept the ground too wet for plowing much of the time. The planting of potatoes and garden truck continued between showers and some corn was planted in central and southern counties, but the unfavorable weather delayed work and retarded the growth of all vegetation. Frost and frequent freezing temperatures damaged the bulk of the peach crop in central and northern sections of the State, but in the Highland Orchard of Pike County, the damage was slight. In most localities apples and berries were not hurt. At the close of the month farm work was somewhat delayed, but this delay is more apparent than real. When compared with last spring which was warm and dry, progress this year is slow, but compared with an average spring farm work is about as far advanced as usual.

W. C. H.

TEMPERATURE

The monthly mean temperature for March, as determined from the records of 58 stations, was 48.5° which is 3.8° below normal, all stations showing negative departures. Monthly means ranged from 57.4° at Huttig to 42.2° at Mammoth Spring, a difference of 15.2° between the northern and southern border counties. The highest temperature recorded during the month was 86° at Dardanelle on the 24th, the lowest, 11° at Gravette on the 8th. The highest occurred in all sections of the State on the 24th, the lowest on different dates. The greatest daily range was 51° at Huttig on the 2nd.

PRECIPITATION

The average precipitation for 85 stations was 5.57 inches which is 0.83 inch above normal. Monthly totals ranged from 9.23 inches at Springbank to 2.04 inches at Searcy. Negative departures occurred at fifteen scattered stations positive elsewhere. An appreciable amount of snow fell at 22 stations and averaged 1.8 inches. The greatest depth measured was 5.4 inches at Bentonville. The average number of rainy days was 9.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Thunderstorms:—6th, 1; 7th, 1; 10th, 1; 14th, 1, 19th, 12; 20th, 17; 21st, 12; 22d, 14; 23d, 2; 24th, 2; 25th, 4; 26th, 1; 28th, 1; 29th, 5; 30th, 25; 31st, 5.

Light Hail:—Blytheville, 15th; Center Point, 19th; Mc Gehee, Gravette, 20th; Freeman Springs, 22d; Gilbert, 23d, 25th.

Solar Halos:—2d, 1; 3d, 2; 26th, 1.

Lunar Halos:—28th, 1.

Dense Fog:—22, 1; 23d, 1.

Sleet:—Blytheville, 15th; Bentonville, 30th; Pocahontas, 31st.

VOL. XXXI LITTLE ROCK, ARK., APRIL, 1926 No. 4

GENERAL SUMMARY

If the temperature of April, 1926, is compared with that of April, 1925, a marked contrast is found. The mean for April, 1925, was, with one exception, the highest on record and the extreme, 98°, equaled the record while the current month was with but three exceptions the coldest on record and the lowest, 18°, equaled the lowest on record. Precipitation was practically the same, both months being among the driest of the past 36 years. Temperatures were normal or above on only about nine days during the month and at no time were there more than two consecutive days with temperatures above normal.

The cold weather of the preceding month, together with the low temperatures this month, delayed the growth of vegetation and all farm work. Considerable corn and cotton were planted but the cool weather did not favor germination and growth, poor stands resulting, and considerable replanting will be necessary. Rice sowing was in progress at the close of the month and the strawberry crop was beginning to move. The drought last year materially reduced the strawberry acreage in Arkansas, but the plants remaining are bearing a crop of excellent quality.

A violent thunderstorm accompanied by heavy wind, approximating a tornado at some points, occurred in Sebastian, Crawford, Franklin, and Logan counties about 5:00 p.m. the 23d. Considerable damage was done in Fort Smith by a straight wind. (estimated $10,000) and a child was killed at Ratcliff, Logan County. Damaging straight winds were also reported the evening of the 23d over a large part of the State Damage was not great in any locality outside of Fort Smith, but at Bearden, Ouachita County, lightning struck the commissary of the Stout Lumber Company causing a loss estimated at $50,000. A small tornado occurred at Hiwassee, Benton County, 5:00 p m. of the 23d. This storm moved from west to east over a path about 1-4 mile wide, doing damage estimated at $3,000. W. C. H.

TEMPERATURE

The monthly mean temperature for April, as determined from the records of 60 stations, was 59.1° which is 2.3° below normal, all stations except Marianna showing negative departures. Monthly means ranged from 62.2° at El Dorado and Portland to 52.4° at Dutton, a difference of 9.8° between northern and southern sections of the State. The highest temperature recorded was 94° at Lambrook on the 29th and 30th, the lowest, 18° at Gravette on the 1st. The lowest occurred in most sections on the 1st, the highest on different dates. The greatest daily range was 55° at Calico Rock on the 16th.

PRECIPITATION

The average precipitation for April, as determined from the records of 85 stations, was 2.65 inches which is 2.23 inches below normal. Monthly totals ranged from 5.81 inches at Texarkana to 1.24 inches at Black Rock. Positive departures were recorded at Center Point and Texarkana, negative at all other stations. A trace of snow was recorded at Gilbert and Osceola, and traces of sleet at Evening Shade, Freeman Springs, and Lurton, all other precipitation falling as rain. The greatest precipitation for 24 consecutive hours was 3.30 inches at Texarkana on the 22d. The average number of rainy days was 7.

ARKANSAS SECTION.

HARVEY S. COLE, Meteorologist

VOL. XXXI LITTLE ROCK, ARK., MAY, 1926 No. 5

GENERAL SUMMARY

May was an abnormal month with regards both temperature and precipitation. The month opened warm, but during the second decade a cool wave overspread the State giving freezing temperatures and killing frost at two northwestern stations and light frost in most northern and central counties, 29° at Dutton on the 15th being the lowest temperature on record for so late in the spring. The latter part of the month was unseasonably warm, day temperatures of 100° or higher occurring at several stations, 107° at Newport on the 29th being the highest May temperature on record for the State. Although not so dry as May a year ago, the rainfall was only 48% of the normal and has been less during only five years since state-wide records have been kept in Arkansas.

Cotton planting was completed during the month. Early planting came up to a poor stand in some sections making replanting necessary, and that planted after the 15th did not come up to a good stand owing to the dry weather, it being necessary to plant corn on some land originally prepared for cotton. Growth was slow owing to the cool dry weather, but by the latter part of the month chopping and cultivation were progressing rapidly, there being little grass and cultivation easy. Corn made good progress and was generally in good condition. The dry weather was favorable for curing hay, but damaged the strawberry crop, especially in White County. At the close of the month all crops except cotton were needing rain. The streams of the State were at moderately low stages throughout the month, the Arkansas at Little Rock reaching 0.3 foot below zero at the close of the month, this being the first May with a stage below zero. W. C. H.

TEMPERATURE

The mean temperature for May, as determined from the records of 57 stations, was 69.7° which is 0.7° above normal. Negative departures were recorded at thirteen stations, positive elsewhere. Monthly means ranged from 73.2° at Helena to 62.4° at Dutton and extremes from 107° at Newport on the 29th to 29° at Dutton on the 15th. The highest occurred in practically all sections on the 28th or 29th and the lowest on either the 5th or the 15th.

PRECIPITATION

The average precipitation for 86 stations was 2.42 inches which is 2.60 less than normal. Monthly totals were slightly above normal at four southern stations, below elsewhere. The greatest monthly total was 6.18 inches, measured at McGehee, the least, 0.48 inch, at Osceola. The average number of rainy days was seven.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Thunderstorms:—1st, 1; 2d, 20; 3d, 8; 6th, 4; 7th, 25; 8th, 23; 9th, 18; 10th, 17; 11th, 26; 12th, 4; 13th, 2; 14th, 1; 17th, 13; 18th, 22; 19th, 11; 21st, 7; 22nd, 2; 26th, 1; 28th, 1; 29th, 8; 30th, 24; 31st, 30.
Killing frost or freezing temperature:—Dutton, Gravette, 15th.
Light frost:—Most northern and central sections 15th.
Solar Halos:—7th, 1; 17th, 1; 26th, 1; 30th, 1.
Lunar Halos:—18th, 1.

Hail and Wind Storms

Place	Date	Time	Character	Width Path	Remarks
Piggott	9	10:30 a	Heavy Hail	3 miles	Damaged fruit, wheat, corn, strawberries, nursery stock.
Hot Springs	9	9:30 p	Moderate Hail		Slight damage
Scotland	9	12:30 p	Heavy Hail	1-2 - 1 1-4 mi.	Considerable damage to gardens and cotton
Horatio	9	2:00 a	Heavy Hail	2 - 4 miles	Damage $50,000
Camden	10	1:00 p	Moderate Hail		Damaged orchards
Hermitage	10	2:30 p	Moderate Hail	1-2 mile	Slight damage
Evening Shade	11	4:00 p	Heavy Hail	1-2 to 1 mile	Damage gardens, cotton, corn. $1,000.
Judsonia (Providence neighborhood 8 mi. north)	11	2:30 p	Heavy Hail	2 miles	Strawberry crop damaged $75,000
Grubbs	17	6:00 p	Wind and Heavy Hail	1 1-2 miles	Corn and cotton damaged $2,000. Wind damage $300
Uniontown (Crawford Co.)	31	6:00 p	Straight wind		Destroyed small buildings 1 man killed by lightning

ARKANSAS SECTION
HARVEY S. COLE, Meteorologist

VOL. XXXI LITTLE ROCK, ARK., JUNE, 1926 No. 6

GENERAL SUMMARY

The temperature in Arkansas during Jnne, 1926, averaged .5° below the mean of the last 35 years and the rainfall 1.42 inches below. Most of the warm weather occurred during the rst half of the month, high day temperatures occurring from ne 12th to the 16th and again on the 30th. Following an unsually dry April and May, June was also dry, the accumulated eficiency for April, May, and June being 6.25 inches. Most f the rain fell as light showers scattered throughout the month. The dry weather was favorable for cotton, very good to exellent progress being reported in all sections. The crop was lean, well cultivated, and squares and blooms were appearing t the close of the month in all except the extreme northern ounties. Weevil and cotton hopper appeared in some fields, ut little damage has been reported thus far. It was too dry n northern and northeastern counties for corn, but elsewhere ne crop made very good progress. Most minor crops made ntisfactory growth except in a few localities where it was too ry.

All streams of the State were at low stages, the Arkansas at ittle Rock being below zero the first few days of the month, his being the second June on record with below zero readings.

W. C. H.

TEMPERATURE

The mean temperature for June, as determined from the reords of 59 stations, was 76.6° which is 0.5° below normal, ositive and negative departures occurring throughout most of he State. Monthly means ranged from 68.8° at Dutton to 1.0° at Rison and extremes from 42° at Dutton on the 6th to 04° at Newport on the 12th. The lowest occurred over most f the State on the 5th or 6th, the highest on different dates.

PRECIPITATION

The average precipitation for 85 stations was 2.60 inches which is 1.42 inches below normal. Positive departures occurred t ten scattered stations, five of which are in the northwestrn section of the State, negative elsewhere. The greatest monthly total was 6.08 inches at Gravette. The least, 0.79 nch, was measured at Amity, Evening Shade, and Newport. The greatest amount measured in 24 consecutive hours was 4.20 inches at Malvern on the 19th. The average number of rainy days was 6.

CORRECTIONS FOR MAY, 1926

Junction: Monthly minimum temperature should be 42 on 16th. Morrillton: Mean temperature should be 71.0. Pindall: Number clear days should be 16: partly cloudy 9: cloudy 6. Subiaco: Mean maximum temperature should be 85.8: Mean temperature 72.3; Departure from normal +2.8.

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXI LITTLE ROCK, ARK., JULY, 1926 No. 7

GENERAL SUMMARY

July was a month of practically normal temperature and rainfall. The first week was marked by high day temperatures, 100° to 109° being recorded at all except a few northwestern stations, but even during this heat wave most of the nights were pleasant. Daily mean temperatures were 10° below the seasonal average about the middle of the month, 42° at Lambrook on the 15th being within 2° of the lowest on record for July, but during the closing days of the month temperatures returned to normal or somewhat above. No rain fell during the first three days of the month, and practically none from the 15th to the 20th, but on remaining days showers were frequent, amounts being light to moderate in most instances except on the 7th, 8th, 26th, and 27th when one to four inches were measured at numerous stations. The geographical distribution was irregular, marked differences occurring within a few miles. Although locally heavy rains occurred, the streams of the State remained at low stages throughout the month, the Little Red at Dam No. 1 being below zero the entire month and the Ouachita at Arkadelphia practically the entire month. The White and the Arkansas were also below zero at different points during the month.

The weather was generally favorable for cotton. Cotton hopper did considerable damage in some localities early in the month, but at the close of the month hopper activity had abated and the crop was generally in good condition. It was too dry for corn, especially in north central sections where the early crop was practically ruined, but elsewhere corn made fairly good progress. An abundant crop of melons and cantaloupes was being marketed the latter half of the month. Rice was in good condition, peaches and grapes excellent.

TEMPERATURE

The mean temperature for the month of July, as determined from the records of 57 stations, was 79.8° which is 0.2° below normal, positive and negative departures occurring throughout the State. The highest monthly mean was 83.0° at Helena and Rison, the lowest, 72.2° at Dutton. Extremes ranged from 109° at Searcy on the 4th to 42° at Lambrook on the 15th. Extremes occurred on approximately these dates throughout the State. The greatest daily range was 45° at Dutton on the 3d.

PRECIPITATION

The average precipitation for 82 stations was 3.55 inches, which is 0.27 inch below normal. The monthly totals ranged from 8.03 inches at Lutherville to 0.61 inch at Helena. The greatest amount measured in 24 consecutive hours was 4.40 inches at Wilson on the 26th. The average number of rainy days was 8.

VOL. XXXI LITTLE ROCK, ARK., AUGUST, 1926 NO. 8

GENERAL SUMMARY

After a June and July marked by mean temperature and average precipitation below normal, August, 1926, was characterized by temperature and precipitation above normal, being the wettest August in Arkansas since 1915. Rain fell at several stations on from ten to fourteen consecutive days beginning about the 12th. Amounts were heaviest in northern counties and resulted in flood stages on the Black River at Black Rock and moderately high stages on the White, however the dammage from overflow was slight. The greatest damage resulted from increased weevil and worm activity in cotton, the progress during this period being poor in a large portion of the State, in fact the crop deteriorated in many localities. During the closing days of the month showers were less frequent and although cotton was too rank in the lowlands and was not fruiting satisfactorily, warm weather and increased sunshine partially overcome the ill effects of the continued showery weather. At the close of the month cotton was opening and picking had begun in all except the extreme northern counties. Late corn and rice made excellent progress during the month and conditions were generally favorable for all minor crops except too much rain for grape harvest, a part of the crop being damaged. Although there was a wide range in temperature during the month, this is to be expected during the summer and all extremes were well within the limits established by previous records.

A tornado occurred in the vicinity of Wilson on the 17th, moving from southwest to northeast over a path 100 yards wide, killing two and injuring eleven. Two men were killed by lightning during the month, one at Kensett on the 16th, the other at Hartman on the 24th. W.C.H.

TEMPERATURE

The mean temperature for Arkansas during August, as determined from the records of 59 stations, was 80.7° which is 1.0° above normal, practically all stations for which normals have been computed showing positive departures. Monthly means ranged from 73.6° at Dutton to 84.2° at Portland and Rison and extremes from 47° at Dutton on the 25th and 26th to 110° at Calico Rock on the 6th. Extremes occurred on approximately these dates over the greater portion of the State. The greatest daily range was 46° at Harrison on the 10th.

PRECIPITATION

The average precipitation for 85 stations was 5.50 inches which is 1.81 inches above normal. Negative departures occurred at 22 stations for which normals have been computed, positive at all others. The greatest monthly total was 12.91 inches at Mammoth Spring. The least, 1.08 inches, was measured at Grannis. The greatest amount measured in 24 consecutive hours was 6.00 inches at Mammoth Spring on the 16th. The average number of rainy days was 10.

Corrections July, 1926

Bee Branch, number clear days should be 16; partly cloudy 12. Waters, number partly cloudy days should be 12; cloudy 7. Wynne, greatest precipitation 24 hours should be 1.00 inch.

VOL. XXXI LITTLE ROCK, ARK., SEPTEMBER, 1926 No. 9

THE LIBRARY OF THE
NOV 5 1926
UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

Although the average precipitation for the month was 0.56 inch above normal and the mean temperature 2.6° above normal, these values do not approach the record of September, 1925, when the temperature averaged 6.3° above normal with an extreme of 113° on the 6th, and the precipitation 2.53 inches above. The month opened with temperatures somewhat above the seasonal average and with the exception of the 9th, 10th, and 11th, continued above until the 25th when a cool wave overspread the State giving the lowest temperatures of the month on the 26th. Light frost was reported at one northwestern station and temperatures of 40° to 45° occurred at numerous northern stations, but no damage was done. There was soon a reaction to warm weather and on the 30th the temperature was about 10° above normal. Most of the rain fell during the first and last weeks of the month, showers being light and scattered during the intervening period. Monthly totals exceeding ten inches occurred at a few northwestern stations, but the area covered was small. Cotton was damaged somewhat and worm and weevil activity increased during the rainy weeks, but infestation was not great and the damage was negligible. There was some delay in picking cotton, but otherwise the weather was generally favorable and satisfactory progress was made in all farm work. Late corn made very good progress and all minor crops were in excellent condition at the close of the month. The rains interfered with rice harvest, but no material damage resulted. There were no disastrous hail or wind storms reported. W.C.H.

TEMPERATURE

The mean temperature for the State during September, as determined from the records of 59 stations, was 76.8° which is 2.6° above normal, all sections showing positive departures. Monthly means ranged from 70.0° at Dutton to 81.3° at Magnolia, a difference of 11.3° between the Ozarks in the Northwest and the southern border counties. Extremes ranged from 101° at Pine Bluff on the 13th to 40° at Lurton on the 26th. The lowest occurred about the 26th or 27th throughout the State, the highest on different dates. The greatest daily range was 47° at Marked Tree on the 20th.

PRECIPITATION

The average precipitation for 83 stations was 3.99 inches which is 0.56 inch above normal. There were a few positive departures in southern and eastern counties, but the heavier totals were confined to the northwestern fourth of the State. The greatest monthly total was 14.55 inches measured at Lurton, the least, 0.27 inch, at Arkansas City. The greatest amount measured in 24 consecutive hours was 4.93 inches at Mount Ida on the 25th. The average number of rainy days was 7.

Corrections August, 1926

Center Point: Number clear days should be 11, cloudy 11.
Searcy: Maximum temperature should be 107 on 6th.
Stuttgart: Number partly cloudy days should be 16, cloudy 4.

L. XXXI LITTLE ROCK, ARK., OCTOBER, 1926 No. 10

GENERAL SUMMARY

The month opened unseasonably warm, temperatures being ° to 14° above normal during the first few days and maxima eeded 90° at numerous stations. There was a reaction to ler weather about the 5th and temperatures near or slightly ow normal prevailed for a day or two then warm weather ain set in and continued until about the 20th when another l wave overspread the State, giving the lowest temperatures the month on the 25th, killing frost and freezing tempera- es occurring in northern counties, heavy frost in central and ht frost to the southern border. A small amount of late corn s injured, but the bulk of the crop was matured, so the dam- was small. Normally October is the driest month of the r in Arkansas but thus far it has been the wettest this year. e average for the State, 5.77 inches, is two inches less than average for October last year and practically five inches less an the average for October, 1919, but with these two excep- ns this total has not been exceeded for this month during the t 36 years. Although much more than the normal rainfall urred, many of the showers fell on Saturdays and Sundays that interference with cotton picking was reduced almost to minimum and satisfactory progress was made in most sections. e threshing was more than half completed during the month d a fourth cutting of alfalfa was saved. Sweet potatoes were g and the yield in most sections was excellent. Some fall wing was done and an increased acreage of fall oats and eat was reported.

The heavy rains the closing days of September brought flood ges on the upper White River the first of this month and fur- r rains at the close of the month caused flood stages to again reached at Calico Rock on the 30th and Batesville on the 31. ese rains caused codsiderable water in the lowlands of the ver reaches of the river during most of the month. Rains the tter part of September and early in October on the Arkansas tershed gave flood stages at Fort Smith on the 1st and again m the 5th to the 16th and at Dardanelle from the 6th to the th. The Arkansas did not reach flood stage at Little Rock, t was near, an unprecedented occurence for October. Flood ges were reached at Pine Bluff from the 12th to the 18th and Yancopin from the 8th to the 28th. Some crops were lost in e lowlands, but warnings being issued, an effort was made to ther as much as possible before the water came up, the total s reported being approximately $700,000. W.C.H.

TEMPERATURE

The mean temperature for October, as determined from the cords of 56 stations, was 64.9° which is 2.7° above normal, actically all stations showing positive departures. Monthly eans ranged from 70.4° at El Dorado to 58.8° at Dutton, a fference of 11.6° between the northwestern and southern unties. Extremes ranged from 99° at Portland on the 2d to ° at Dutton on the 25th. Extremes occurred on approxi- ately these dates throughout the State. The greatest daily nge was 52° at Dardanelle on the 21st.

PRECIPITATION

The average precipitation for 80 stations was 5.77 inches which is 2.80 inches above normal. Negative departures occurred at five scattered stations, positive elsewhere. The greatest monthly total was 12.08 inches at Texarkana, the least, 2.49 inches, at Georgetown. The greatest amount measured in 24 consecntive hours was 9.23 inches at Texarkana on the 10th. The average number of rainy days was 8.

Corrections September, 1926

Batesville: Number clear days 15; part cloudy, 3; cloudy, 12.
Freeman Springs: Prevailing wind direction should be SE.
Pindell: Prevailing wind direction should be SE.
Stuttgart: Date of lowest temperature should be 26th.
Waters: Number of clear days should be 11.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXI LITTLE ROCK, ARK., NOVEMBER, 1926 No. 11

JAN 1927 LIBRARY OF THE DEC 29 1926 UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

The outstanding characteristic of the weather in Arkansas during November, 1926, was the low monthly mean temperature. In only one year since State wide records have been kept, 1911, has the November mean been lower. The temperature was normal or above on about nine days during the month, the greatest positive departures occurring on the 25th, while during the remainder of the month daily means ranged from slightly below normal to as much as 20° below. Although the mean was low, the extreme, 10° at Dutton on the 19th, is not unusual. About the normal rainfall occurred with the average number of rainy days. The weather was generally favorable for picking cotton and in most sections of the State cotton was nearly all picked at the close of the month, however in eastern and northeastern counties some remained in the field the first of December. Most other crops have been gathered and all farm work is well along. Rice threshing was practically completed, considerable fall plowing done, and wheat, oats, meadows, and rye were in good condition at the close of the month.

Tornadoes were reported in 26 different localities in Arkansas from 4:30 p.m. to 9:30 p.m. of November 25th. It is thought that there were 11 different tornadoes. Fifty two persons were killed, 212 injured, and property valued at $627,000 was destroyed. The most destructive of these storms originated near Greenbrier at 5:00 p.m., passed through Enders, Quitman, Pearson, and Heber Springs, disappearing in the hills to the northeast about 6:00 p.m. Another tornado originated at Jesseville at about 4:45 p.m., passed through Aplin, near Perry, through Appelo, Wooster, and Greenbrier, reaching the latter place about 6:30 p.m. One passed through Belleville and Stafford, and over Crow Mountain and Mars Hill. A tornado passed through Old Hickory and near St. Vincent, one through Buford and Float Creek, and one each through Arkadelphia, Choctow, Gould, Macedonia, Moscow, and Portland, and one near Newport and one near Sheridan.

TEMPERATURE

The mean temperature for November, as determined from the records of 55 stations, was 47.2° which is 4.4° below normal, all sections showing negative departures. Monthly means ranged from 41.2° at Lurton to 51.9° at Texarkana, a difference of 10.7o between the northwestern and the southern sections of the State. Extremes ranged from 81o at Corning on the 6th to 10° at Dutton on the 19th. The highest occurred in most sections about the 6th or the 25th and the lowest from about the 19th to the 22d. The greatest daily range was 55° at Corning on the 6th.

PRECIPITATION

The average precipitation for 79 stations was 3.33 inches which is 0.32 inch below normal. A majority of the stations showed negative departures, but there were no marked extremes. The greatest monthly total, 8.59 inches, was measured at Black Rock and the least, 0.87 inch, at Amity. The greatest amount measured in 24 consecutive hours was 3.38 inches at Lurton on the 14th. An appreciable amount of snow fell at 19 stations, averaging 2.9 inches. The greatest monthly total was 8.7 inches at Bentonville. The average number of days with 0.01 inch or more precipitation was 6.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

OL. XXXI LITTLE ROCK, ARK., DECEMBER, 1926 No. 12

GENERAL SUMMARY

The outstanding feature of the weather in Arkansas during ecember, 1926, was the unusually heavy precipitation, the onthly total, 7.15 inches, being the second largest on record r this section since State wide records have been kept and the reatest 24 hour amount, 5.91 inches at Little Rock on the 20th 1st is one of the heaviest on record. Heavy rains occurred roughout most of the State on the 20th-21st, amounts being eaviest in central and south central counties. These rains rought sharp rises in all streams and a rather disastrous flood the Ouachita, a stage of 38.5 feet being reached at Camden. ne life was lost and property damage estimated at over 75,000 was sustained. Three lives were lost and several housand dollars damage done to roads and bridges in Pulaski ounty.

Temperatures were rather mild for a winter month until bout the 14th when a cold wave overspread the State bringing he coldest weather of the month in some localities, however here was soon a reaction to warmer weather and by the 20th emperatures were again 10° to 15° above the seasonal average. older weather again overspread the State about the 24th and 5th, the lowest for the month, 3° below zero, being recorded the 26th. Snow fell over a greater portion of the State on he 25th, but was melted before the close of the month.

The weather was rather unfavorable for outdoor work during ost of the month. Some cotton remained in the fields in astern and northeastern counties and but little was picked uring the month. The weather was mostly favorable for the rowth of winter crops until the last week when oats were frost-d. Some plowing was done early in the month, but this work as stopped by the rain. W.C.H.

TEMPERATURE

The mean temperature for the State, as determined from the ecords of 55 stations, was 43.3° which is 0.8° above normal. ourteen stations for which normals have been computed show-d negative departures, positive elsewhere. The highest month-y mean was 49.9° at Portland, the lowest 37.4° at Dutton, a ifference of 12.5° between the Ozarks of the northwest and he lowlands of the southeast. Extremes ranged from 79° at ortland on the 4th and Rison on the 12th to 3° below zero at Mammoth Spring on the 26th. The highest occurred in most ections about the 4th or 12th and the lowest about the 16th or he 26th.

PRECIPITATION

The average precipitation for 79 stations was 7.15 inches hich is 3.10 inches above normal, all sections showing positive departures. More than half of the monthly precipitation ccurred at numerous stations on the 20th and 21st and the verage for the entire State for those days was over three inches. An appreciable amount of snow was measured at 55 stations, he average being 3.1 inches. The greatest monthly precipita-ion total was 12.43 inches at Portland, the least, 2.53 inches t Gilbert. The greatest amount measured in 24 consecutive ours was 5.91 inches at Little Rock on the 20th and 21st. he average number of days with 0.01 inch or more of precipi-ation was 10.

Corrections November, 1926

Huttig: Mean maximum temperature should be 66.9o; mean minimum 36.9o; mean 51.9o; Departure from normal —
Mammoth Spring: Num[illegible] partly cloudy days should be 2, cloudy 13.
Tornado Table: Appelo[illegible]ould be Oppelo and Jesseville should be Jessieville.

VOL. XXXI LITTLE ROCK, ARK., YEAR, 1926 No. 13

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during the year 1926 were the low temperatures of January, a warm February, extremes of heat and cold in May, dry spring and early summer, wet fall, destructive tornadoes in November, and a wet December.

The mean temperature for the year was 61.3° which is 0.1° above normal, February, May, August, September, October, and December being above normal, the other six months below. The highest annual mean was 65.0° at Portland, the lowest, 54.7° at Dutton, a difference of 11.2° between the highlands of the northwestern counties and the lowlands of the southeastern. Extremes ranged from 17° below zero at Harrison on January 23d to 110° at Calico Rock on August 6th. Temperatures, zero or lower, were recorded in January and December, 100° or above in May, June, July, August, and September. The 17° below zero at Harrison on January 23d is the lowest temperature recorded in the State since January, 1918, when 23° below zero was recorded at Mammoth Spring.

The average precipitation for the State was 49.24 inches which is 1.63 inches above normal. The eastern counties and a small area from Washington to Logan counties showed negative departures, positive prevailing elsewhere. While the average for the year was near normal local monthly and annual amounts show a wide range. The greatest monthly total was 14.55 inches at Lurton during September and the least 0.27 inch occurred in the same month at Arkansas City. The greatest annual total was 62.86 inches at Texarkana, the least 38.29 inches at Subiaco. Departures from normal were positive in January, March, August, September, October, and December, negative during the other months. The precipitation from April 1st to October 31st, which was approximately the growing season, was 26.48 inches which is 1.35 inches below normal. The temperature for the same period averaged 0.6° above normal. Although there was a deficiency of precipitation during the crop season and early corn was seriously damaged, this deficiency enabled farmers to cultivate their crops with much less work than is necessary during a rainy period. The heavy rains in the fall months were a serious handicap, cotton picking and rice threshing being delayed and in northeastern counties considerable cotton remained in the fields at the close of the year.

The growing season was about two weeks shorter than the average. The last killing frost in spring occurred at an average date of about April 7th and the first in autumn about October 25th. The length of the growing season, from the last killing frost in spring to the first in autumn, for 83 stations, was 201 days and ranged from 163 days at Gravette to 239 days at El Dorado. W.C.H.

January:--The temperature averaged 0.6° below normal and the precipitation 0.59 inch above, all extremes being well within the limits established by previous records. There were two cold periods during the month, from the 7th to the 14th and from the 21st to the 26th. During the remainder of the month temperatures were generally somewhat above normal. Snow fall averaged 3.7 inches at 57 stations and in some localities remained on the ground five or six days. The melting snow and locally heavy rains caused the smaller streams of the State to reach moderately high stages. The weather for the month as a whole was favorable for outdoor work and for the growth of winter grains.

February:--The weather was warm during February, the daily mean temperature being below normal on only six days during the month and 88° at Huttig on the 7th is near the record high temperature for the month. Precipitation was light, averaging only 60% of the normal amount with only four rainy days. The mild weather was very favorable for all farm work, oats being sown and land prepared for corn, cotton, and rice. Potatoes, truck, and gardens were planted in southern and central sections and winter grains made excellent progress. Peaches, plums, and pears were blooming in southern counties at the close of the month and fruit buds swelling in northern counties.

March:--March was a damp disagreeable month, the temperature for the State being the same as during February and while precipitation was not excessively heavy, light to moderate showers were of frequent occurrence, the ground being too wet for plowing much of the time. Some farm work was done between showers, but unfavorable weather delayed all work and retarded the growth of vegetation. The peach crop was damaged in central and northern sections by frost and freezing temperatures, but in the Highland Orchard damage was slight. Apples and berries were not materially injured.

April:--The mean temperature for April was, with but three exceptions, the lowest on record and the lowest temperature recorded, 18° at Gravette on the 1st, is the lowest on record. The cold weather of the preceeding month, together with the low temperatures this month, delayed growth and the progress of farm work. Considerable corn and cotton were planted but the cool weather did not favor germination and growth, poor stands resulting, and considerable replanting was necessary. Rice was being sown at the close of the month and the strawberry crop was being marketed. The dry weather of 1925 had materially reduced the strawberry acreage but a crop of excellent quality was ripening.

May:--May was abnormal with regards both temperature and precipitation. The month opened warm, but during the second decade a cool wave overspread the State giving killing frost and freezing temperature at two northwestern stations and light frost in most northern and central counties, 29° at Dutton on the 15th being the lowest temperature on record for so late in the spring. The latter part of the month was unseasonably warm, day temperatures exceeding 100° occurring at several stations. The rainfall was only 48% of the normal with five rainy days. The early planting of cotton did not come up to a stand because of the cold weather and after the 15th there was insufficient soil moisture to insure a stand, much land intended for cotton being planted to corn. The dry weather damaged the strawberry crop in White County. The streams of the State were at low stages throughout the month.

June:--The weather in Arkansas averaged 0.5° below normal with regards temperature and 1.42 inches below with regards precipitation, most of the rain falling as light showers scattered throughout the month. The dry weather was favorable for cotton, the crop being clean and well cultivated in all sections of the State and squares and blooms were appearing at the close of the month except in northern counties. It was too dry for corn in northeastern counties, but elsewhere the crop made very good progress. All streams of the State were at low stages throughout the month.

July:--Although the extremes of temperature and precipitation showed a wide range during the month, the means were practically normal. The geographical distribution of the rainfall was irregular, marked differences occurring within a few miles. The weather was favorable for cotton, but too dry for corn, especially in north central sections where early corn was practically ruined. Other crops made satisfactory progress, an abundant melon and cantaloupe crop being marketed.

August:--The month was marked by an average temperature 1.0° obove normal and precipitation 1.81 inches above normal, this being the wettest August since 1915. Rain fell at several stations on from ten to fourteen consecutive days, amounts being heaviest in northern counties, the Black and White rivers reaching moderately high stages. At the close of the month cotton picking had begun in all except the extreme northern counties. Late corn, rice, and all minor crops made excellent progress during the month except there was too much rain for grape harvest in some localities.

September:--September was marked by mean temperature 2.6° above normal and precipitation 0.56 inch above. Daily mean temperatures were generally above normal until about the 25th when a cool wave overspread the State giving the lowest temperature of the month on the 26th with light frost reported at Lurton. Cotton was damaged somewhat by the rather heavy rains and weevil and worm activity increased, however infestation was not great and the damage negligible. Cotton picking was somewhat delayed and rice harvest was halted by the rainy weather the last week of the month, otherwise conditions were generally favorable.

October;--The month opened unseasonably warm and temperatures were generally near or somewhat above normal until the 20th when a cool wave overspread the State giving the lowest temperatures of the month on the 25th, killing frost and freezing temperatures occurring in northern counties, heavy frost in central, and light frost to the southern border. Normally October is a dry month, but the total precipitation, 5.77 inches is next to the heaviest of any month of the year. Cotton picking continued between showers, approximately half of the rice crop was harvested, and a fourth cutting of alfalfa was saved. The heavy rains the closing days of September brought flood stages on the upper White River the first of this month and further rains the close of October caused flood stages to again be reached at Calico Rock and Batesville on the 31st. High stages were also recorded on the Arkansas. The total loss incident to the high water is estimated at $700,000.

November:--The outstanding characteristic of the weather during November was the low mean temperature, this being with but one exception the coldest November on record in Arkansas. Approximately the normal rainfall occurred. Conditions were favorable for cotton picking and rice harvesting, but in northeastern counties considerable cotton remained in the field at the close of the month. Considerable fall plowing was done and all winter grains were in good condition at the close of the month. Tornadoes were reported in twenty six localities on the 25th, details being given in the table on page 56.

December:--December was the wettest month of the year and the second wettest December on record. Excessively heavy rains occurred throughout the State on the 20th-21st, half of the rainfall of the month occurring at numerous stations on these days. The rains brought sharp rises in all streams and a rather disastrous flood on the Ouachita. One life was lost and property damage estimated at over $75,000 was sustained. Three lives were lost and several thousand dollars damage done to roads and bridges in Pulaski County. Temperatures were mild until the 14th, when a cool wave overspread the State. Another cool wave about the 25th-26th brought the coldest weather of the month, 3° below zero being reported at Mammoth Spring. The weather was unfavorable for outdoor work, but winter crops made satisfactory growth except that oats were frosted in some localities the latter part of the month.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record: but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. Reference letters [a], [b], [c], appearing in the table indicate number of days missing: for example, [b] represents two days missing. † Also on later dates. ‡‡ Post-office addresses of these stations as follows:- Dam No. 1, Judsonia, Ark., Junction, Lillie, La.; Lutherville R. F. D. No. 1, Lamar, Ark. Springbank, Doddridge, Ark. §30 days missing.

Monthly and Annual Mean Temperatures for the Year 1926, with Departures from the Normal

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXII LITTLE ROCK, ARK., JANUARY, 1927 No. 1

GENERAL SUMMARY

The outstanding characteristic of the weather in Arkansas during January, 1927, was the almost continuous sunshine from the 1st to the 12th and almost continuous rain after the 17th. Although unusual, similar long periods of fair weather have occurred during January, in 1914 for example, very little rain occurred until the 24th day of the month and in 1923 little rain occurred during the first half of the month. Beginning with the 18th light to moderate rain was of almost daily occurrence and for nearly two weeks practically no sunshine occurred. The continuous rain brought flood, or near flood, stages on all streams, the Little Red at Judsonia being near a record high stage. The total property damage in Arkansas from these floods is estimated at over $200,000. Dirt roads were practically impassable in many sections of the State at the close of the month. This was the warmest and the wettest January since 1923, but neither the temperature nor precipitation extremes were record breaking, the temperature averaging only 1.5° and the precipitation 1.31 inches above normal.

During the first half of the month out door work was carried on, considerable cotton being picked in northeastern sections of the State, but during the latter half everything was at a stand still and in the lowlands all effort was towards moving people and livestock to places of safety and the re-enforcing of levees. Meadows, pastures, and all winter grains made satisfactory progress except where flooded. Fruit buds remained dormant. W.C.H.

TEMPERATURE

The mean temperature for January, as determined from the records of 57 stations, was 42.6° which is 1.5° above normal, practically all sections showing positive departures. The highest monthly mean was 54.3° at Huttig, the lowest, 36.6° at Lurton, a difference of 17.7° between northwestern and southern sections of the state. Extremes ranged from 79° at several stations on the 2d and later dates to 1° below zero at Dutton on the 15th. The lowest occurred in practically all localities on the 15th, the highest on different dates. The greatest daily range was 50° at Calico Rock on the 3d.

PRECIPITATION

The average precipitation for the State, as determined from the records of 82 stations, was 5.41 inches which is 1.31 inches above normal. Negative departures occurred at several southern and southeastern stations, positive at all northern stations. Practically all the precipitation occurred the 13th and from the 18th to the 30th. Monthly totals ranged from 10.72 inches at Lutherville to 1.98 inches at Portland. The greatest amount measured in 24 consecutive hours was 4.39 inches at Lutherville on the 22d. The average number of days with 0.01 inch or more precipitation was 10.

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
ARKANSAS SECTION
HARVEY S. COLE, Meteorologist

VOL. XXXII LITTLE ROCK, ARK., FEBRUARY, 1927 No. 2

GENERAL SUMMARY

February was marked by unusually warm weather. Monthly means were above normal throughout the State with departures reaching 14° in some localities and averaging 9.3° for the State as a whole, the monthly mean, 52.1°, exceeding by 2.3° the mean of February, 1911, which here-to-fore had been the warmest on record. The month opened with temperatures slightly above normal and unusually warm weather prevailed until the 8th, daily means being as much as 26° above the seasonal average. From the 9th to the 12th a cool wave overspread the State giving temperatures slightly below normal, but from the 14th to the 17th temperatures were again high. A cold wave from the 18th to the 20th brought the lowest temperatures of the month in practically all sections and temperatures were again below normal on the 27th and 28th. Although the monthly mean is the highest recorded, the extreme of 90° is not record breaking, 93° having been recorded in 1918.

The heavy rains of January caused flood stages in all streams and in the lower reaches of the rivers flood conditions continued from one to two weeks during February with the Arkansas at Yancopin above flood the entire month and the St. Francis at Marked Tree to the 20th. The Mississippi was also above flood stage at Helena and Arkansas City during most of the month. The high water prohibited any preparation for crop planting in the low lands of the eastern counties and the rainfall, fairly evenly distributed throughout the month, kept the soil too wet in most other sections for much plowing to be done. Temperatures being high buds began swelling and by the close of the month peaches, plums, and pears were blooming in central and southern sections of the State and a few blooms were reported in northern counties, apprehension being felt for the safety of the fruit crop. W.C.H.

TEMPERATURE

The mean temperature of the State for the the month of February, as determined from the records of 58 stations, was 52.1° which is 9.3° above normal, all sections showing positive departures. The highest monthly mean was 60.3° at Huttig, the lowest, 44.9° at Dutton, a difference of 15.4° between the northwestern and southern sections of the State. The higest temperature recorded was 90° at Rison on the 16th, the lowest, 9° at Dutton on the 19th. The highest occurred at most stations about the 4th or 16th while the lowest occurred on different dates. The greatest daily range was 51° at Calico Rock on the 22.

PRECIPITATION

The average precipitation for the State during the month of February, as determined from the records of 84 stations, was 2.62 inches which is 0.73 inch below normal. A dozen or more stations showed positive departures, negative elsewhere. Amounts were fairly well distributed throughout the month, the totals ranging from 7.02 inches at Dumas to 1.23 inches at Thornburg. Snow and sleet occurred over a large part of the State on the 27th or 28th, while the other precipitation fell as rain. The greatest amount measured in 24 consecutive hours was 2.95 inches at Hope on the 28th. The average number of days with 0.01 inch or more precipitation was 8.

CHARLES F. MARVIN, Chief

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXII LITTLE ROCK, ARK., MARCH, 1927 No. 3

GENERAL SUMMARY

The outstanding features of the weather in Arkansas during March were the positive precipitation and temperature departures, the uneven distribution of precipitation, tornadoes the 17th and 18th, and the flooded condition of the lowlands in the lower Arkansas and White river valleys.

The month opened unseasonably cold with snow, sleet, and glaze in northern and central counties and cold rain in the southern. From the 6th to the 12th and from the 14th to the 20th temperatures were normal or above, departures of 15° to 20° occurring from the 16th to the 20th at numerous stations. Frequent showers kept the soil too wet for farm work to progress rapidly and at the close of the month far less than the usual amount of land had been prepared for planting. Wheat, oats, and meadows made satisfactory progress during the month. Fruit and tender vegetables were damaged by frost on the 22d.

The flooded condition of the eastern lowlands which prevailed during February was only partially relieved in March. The Arkansas remained above flood stage at Yancopin during the entire month and the Mississippi was above flood stage at Helena after the 20th. The smaller streams of the State were at or near flood stages at different times during the month. In these lowlands practically no farm work was done.

During the early evening of the 17th and 18th tornadoes occurred in Arkansas. The one on the 17th started near Delight, Pike County, and moved northeastward to the Pulaski County line near Collegeville, killing 12 people, injuring 25 or more, and doing considerable property damage, most of the loss being in Saline County. The storm on the 18th started at Swain Mountain, eight miles south of Eureka Springs, Carroll County, and moved northeast to Green Forest, then southeast to Coin and northeast to Denver. This storm killed 24 people, injured 100 or more, demolished 50 homes, and partially wrecked 150 or more, the property damage being estimated at $500,000. W.C.H

TEMPERATURE

The mean temperature for March, as determined from the records of 57 stations, was 53.5° which is 0.8° above normal. The highest monthly mean was 59.7° at Huttig and Magnolia, the least, 47.4° at Dutton, a difference of 12° between the northwestern and the southern border counties. The highest temperature recorded was 87° at several stations on the 19th and later dates. The lowest was 5° at Dutton on the 3d.

PRECIPITATION

The average precipitation for the State, as determined from the records of 83 stations, was 7.20 inches which is 2.46 inches above normal. Nine stations for which normals have been computed showed negative departures, positive at all others. Amounts were fairly well distributed throughout the month, the monthly totals ranging from 2.65 inches at Magnolia to 15.70 inches at Yancopin. Sleet or glaze was reported at numerous stations on the 1st and an appreciable amount of snow was measured at 21 stations, averaging 2.4 inches. The greatest precipitation measured in 24 consecutive hours was 9.00 inches at Huttig on the 11th. The average number of days with 0.1 inch or more was 12.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

THUNDERSTORMS:--2d, 1; 5th, 4; 6th. 7; 7th, 17; 8th, 3; 10th, 1; 11th, 31; 12th, 11; 14th, 1; 15th, 2; 16th, 7; 17th, 27;18th, 22; 19th, 12; 20th, 18; 21st, 1; 23d, 11; 24th, 1;26th, 8; 27th, 6; 28th, 9; 29th. 20; 30th. 17; 31st, 26.

KILLING FROST OR FREEZING TEMPERATURE: Most sections 22d and earlier dates.

SOLAR HALOS:---3d, 1; 5th, 1; 10th, 1.

SLEET---GLAZE--Numerous stations 1st, 18th, 21st.

HEAVY HAIL:--Scattered localities, Delight, Pike County, to Collegeville, Pulaski County, 17th; Bee Branch, Rogers, Subiaco, 18th, Carroll County, 18th; Osceola, 29th.

DENSE FOG:------12th, 1.

Corrections February, 1927

Camden, date of highest temperature should be 16th.
Dumas, date of highest temperature should be 16th.
Hope, precipitation 17th should be T. , total 6.02, departure +2.03. Number days 0.01 or more should be 7. Prevailing wind direction should be S.
Huttig, number days clear should be 11, cloudy 10.
Mammoth Spring, total snowfall should be 6.3 inches.
Marshall, clear days should be 8, cloudy 10.
Rison, mean temperature should be 58.2, departure +13.8.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXII LITTLE ROCK, ARK., APRIL, 1927 No. 4

THE LIBRARY OF THE

GENERAL SUMMARY

High temperatures and excessive precipitation were the unusual features of the weather in Arkansas for April, 1927. Higher April means have been recorded but twice in the past 37 years and the extreme, 99° at Harrison, is the highest April temperature on record. Killing frost occurred at many northern stations on the 22d. The average precipitation for the State was 12.93 inches, the greatest average previously reported being 10.90 inches in October, 1919. The greatest monthly amount was 23.80 inches, the greatest amount previously reported being 23.50 inches at Howe in May, 1905. The rains were general from the 5th to the 21st and were heavy to excessive from the 11th to th 15th and from the 18th to the 21st. Little rainfall occurred during the remainder of the month. At Story 11.40 inches was reported on the 21st which is the greatest 24-hour amount except one on record. The rainfall was much heavier in the Ozarks than in other portions. Amounts of over 16 inches were reported over an irregular area extending from Montgomery, Garland, and Saline counties northward to Baxter county, the stations at Jessieville, Story, and Danville reporting over 20 inches. Amounts of less than 10 inches were reported in the southeastern, southwestern, and northwestern portions.

The continued rains caused great delay in planting corn and cotton and the excessive rains in Arkansas and nearby portions of Missouri, Kansas, and Oklahoma, caused floods in all of the streams, most of them reaching the highest stages on record. Practically all levees in the State except those under Government supervision gave way in places or were submerged, and breaks occurred in the Government levee at South Bend and Pendleton, the overflowed area being about 6, 880 square miles. All crops or preparation for planting in this area was destroyed, 127 persons were known to have been drowned, and property valued at over $7,000,000 destroyed. A small tornado occurred at Fort Smith on the 12th in which 2 persons were killed, 13 injured, and property valued at $100,000 was destroyed.

TEMPERATURE

The mean temperature for April, as determined from the records of 58 stations, was 65.7° which is 4.3° above normal, all stations for which normals have been computed showing positive departures. Monthly means ranged from 60.3° at Dutton to 70.7° at Huttig, a difference of 10.4° between the northwestern and southern border counties. The highest temperature recorded was 99° at Harrison on the 27th. the lowest, 26° at Dutton and Harrtson on the 22d. The highest occurred in most sections about the 10th or the 27th, the lowest about the 22d. The greatest daily range was 52° at Harrison on the 3d.

PRECIPITATION

The average precipitation for 84 stations was 12.93 inches which is the highest monthly average in Arkansas since state wide records have been kept. Monthly totals ranged from 23.80 inches at Story to 5.94 inches at Amity, all stations for which normal have been computed showing positive departures. The greatest amount measured in 24 consecutive hours was 11.40 inches at Story on the 21st. The average number of rainy days was 12.

April Hail and Wind Storms
(Straight Blows)

Place	Date	Time	Character	Width Path	Damage
Malvern	4	10:40p	Moderate Hail		Slight damage
Arlberg	10	1:30p	Heavy Hail	3 miles	Crop loss $200 Roofs damaged
Pine Bluff	14	3:00p	Straight blow		Slight damage
	20	p.m.	Straight blow		Slight damage
Morrillton	20	10:00a	Moderate Hail		Slight damage

VOL. XXXII LITTLE ROCK, ARK., MAY, 1927 No. 5

THE LIBRARY OF THE
JUN 1927
UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during May were the positive temperature and precipitation departures. Every month of the year thus far has shown a positive temperature departure and every month except February a positive precipitation departure. There were no marked extremes of temperature, daily means at no time being more than 10° to 12° abnormal. During the first week temperatures were generally near or somewhat above normal and after the 16th were almost uniformly above, the mean for the month being the highest since 1918. Showers were of almost daily occurrence, rain being recorded in the State every day except the 11th and on the 22d heavy to excessive amounts were recorded in most sections. Although the flood condition in the lowlands of the eastern counties improved, flood stages were recorded throughout the month on the Black at Corning and Black Rock, at Yancopin on the Arkansas, Marked Tree on the St. Francis, and an average of about 11 days at stations on the Mississippi and lower White. Wherever the water subsided plowing and planting were rushed as rapidly as possible, but many acres of river bottom land had not been planted at the close of the month. Cotton and corn on higher ground made satisfactory progress during the month, and at the close of the month cultivation was under way, however all crops are late and farmers were greatly handicapped by frequent showers, some cotton still remaining to be planted. Wheat and oats were ready to cut at the close of the month, alfalfa cutting was in progress, and the condition of all other crops was satisfactory. W.C.H.

TEMPERATURE

The mean temperature for the State as determined from the records of 54 stations was 71 7° which is 2.7° above normal, all stations for which normals have been computed showing positive departures. Monthly means ranged from 65.8° at Dutton to 76.1° at Huttig. The highest temperature recorded during the month was 97° at Portland on the 29th and 31st, the lowest, 32° at Dutton on the 16th. The highest occurred in most localities during the closing days of the month and the lowest about the 16th. The greatest daily range was 50° at Ozark on the 19th.

PRECIPITATION

The average precipitation for 80 stations was 6.54 inches, which is 1.52 inches above normal. The geographical distribution was irregular, heavy and relatively light amounts being measured at nearby stations. The greatest monthly total was 14.03 inches measured at Higden, the least, 1.68 inches, at Arkansas City. Six stations measured over ten inches. The greatest amount for any 24 hour period was 8.63 inches at Higden on the 22d. The average number of rainy days was 9.

May Hail and Wind Storms
(Straight Blows)

Place	Date	Time	Character	Width Path	Damage
Rogers	8		Moderate Hail		Slight damage
Paragould	9		Moderate Hail		Slight damage
Pocahontas	13	3.30p.	Heavy Hail		Fruit injured, other crops destroyed, est. damage. $5,000.
Jonesboro	28		Heavy Hail		Greenhouse windows broken, also other damage, est. $1500.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXII LITTLE ROCK, ARK., JUNE, 1927 No. 6

GENERAL SUMMARY

The mean temperature of the State during June was 0.8° below normal, this being the first month of the year with a negative departure. The month was also marked by heavy rainfall, the average of 6.50 inches being the greatest June total of the last 23 years and with but two exceptions the greatest on record. Although the temperature averaged almost a degree below normal there were no unusually low extremes, the lowest, 43° at Dutton on the 16th being well within the limit of previous records. The month opened with practically normal temperatures prevailing and while daily means were as much as 7° above normal on a few days, most of the month was cool with the lowest 10° to 12° below around the 6th. The heavy rains kept the streams of the State at moderately high stages throughout the month, the Black being above flood stage at Corning and Black Rock practically the entire month, the White reaching flood at Calico Rock and Batesville and the lower White near or above a week or more. The lower Arkansas was above flood stage the entire month, the Mississippi at Helena was above from the 8th to the 25th and the smaller streams much of the time. Although the flood condition of the eastern lowlands improved there was still much land unplanted at the close of the month. Tha weather of the month was favorable for the growth of cotton, stands being good in most places. Cultivation was delayed by the frequent showers and some fields were grassy, but sunshine the latter part of the month enabled most farmers to get over the crop. Blooms were reported by the close of the month in southern counties and boll weevil in a few localities. Corn made good progress and was in good condition generally. All minor crops made satisfactory progress. W.C.H.

TEMPERATURE

The mean temperature for June, as determined from the records of 56 stations, was 76.3° which is 0.8° below normal. Positive departures occurred at two eastern and nine southern stations, while at other stations temperatures were normal or below. The highest monthly mean was 81.4° at Huttig. the lowest, 69.4° at Lurton. The highest temperature recorded was 104° at Amity on the 25th and 26th. The lowest was 43° at Dutton on the 16th.

PRECIPITATION

The average precipitation for June, as determined from the records of 81 stations, was 6.50 inches which is 2.48 inches above normal. A few scattered stations showed negative departures, but in most sections positive departures prevailed. The greatest monthly total was 14.57 inches at Hot Springs, the least 2.70 inches at Huttig. The greatest amount measured in any 24 hour period was 6.22 inches at Danville on the 6th. The average number of rainy days was 9.

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
ARKANSAS SECTION
HARVEY S. COLE, Meteorologist

VOL. XXXII LITTLE ROCK, ARK., JULY, 1927 No. 7

GENERAL SUMMARY

The weather in Arkansas during July was marked by temperatures slightly below normal and precipitation slightly above. The month opened with near seasonal temperatures prevailing and no unusual extremes occurred, daily means ranging from about 5° above to 9° below normal. This was the coolest July since 1918 when the temperature was the same as this month, but the highest, 104°, is unusually low for the July extreme, while the lowest, 49°, is practically normal.

There was but little rain during the first two weeks of the month, but beginning with the 14th showers were frequent and the latter half of the month was too wet. Cotton fields were cleaned the first of the month but the showers caused too rank a growth in some localities, however the close of the month found the crop blooming in all sections of the State and generally in good condition. No serious damage from weevil or worms occurred. Corn made good progress, especially in the hills, early corn being matured in many places, but in the lowlands the soil was too wet and progress and condition were unsatisfactory. All minor crops made satisfactory progress except where too wet. The lower Arkansas was above flood stage the first 8 days of the month. W.C.H.

TEMPERATURE

The mean temperature for July, as determined from the records of 56 stations, was 79.6° which is 0.4° below normal. Positive departures occurred at 7 southern stations, at five scattered stations north of the Arkansas River, while at other stations temperatures were normal or below. The highest monthly mean was 83.6° at Huttig, the lowest, 72.8° at Dutton. The highest temperature recorded during the month was 104° at Amity on the 11th. The lowest was 49° at Dutton on the 4th and Booneville on the 9th. The greatest daily range was 44° at Booneville on the 9th.

PRECIPITATION

The average precipitation for the State, as determined from the records of 83 stations, was 4.25 inches which is 0.43 inch above normal. The greatest monthly total was 8.63 inches at Pindall, the least, 0.58 inch at Magnolia. The greatest amount for any 24 hour period was 4.90 inches at Harrison on the 30th. The average number of rainy days was 6.

Corrections June, 1927

Lutherville:--Mean temperature should be 73.9°, departure –1.9 .
Camden: -----Date highest temperature should be 26th.

OL. XXXII LITTLE ROCK, ARK., AUGUST, 1927 No. 8

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas uring August were the positive precipitation and the negative mperature departures, this being the coldest August since 915 and also the wettest. As is often the case, when the temerature is low the rainfall is correspondingly high, and in this espect August was true to form. During the past 37 years ut two Augusts have had lower mean temperatures. In August, 1891, the mean temperature was 76.4°, and in August, 915, the mean was 74.7°. August, 1927, with a mean of 76.6° eing the next coolest. Daily means were above normal on n average of only six days. The precipitation of August, 1911, 914, and 1915, was heavier than the past month, these being he only Augusts on record with heavier rainfall. Showers were f almost daily occurrence, rainfall being recorded at one or nore stations every day except the 20th, 21st, and 25th.

Although the weather was too cool for cotton and the rainall too heavy, causing rank growth, still the crop made fairly ood progress over most of the State. Considerable shedding as reported at the close of the month and while weevil were umerous in some localities, infested areas were not large. The ains were favorable for hill corn and for hay crops. Early corn as matured at the close of the month and late corn making atisfactory progress. Minor crops were generally in satisfactory condition.

The rains brought flood stages at points on the Black, White, Petit Jean, and Arkansas rivers. Flood stages prevailed only a day or two on the upper rivers, but water running through the breaks in the levees along the lower rivers inundated 60,000 acres of land and did serious damage to crops in these areas.

W.C.H.

TEMPERATURE

The mean temperature for August, as determined from the records of 56 stations, was 76.6° which is 3.1° below normal, Hope and Texarkana being the only stations showing positive departures. The highest monthly mean was 82.0° at Hope and Texarkana, the lowest, 70.5° at Dutton. The highest temperature recorded during the month was 105 at Texarkana on the 1st. The lowest was 43° at Dutton on the 21st. The greatest daily range was 41° at Thornburg on the 26th.

PRECIPITATION

The average precipitation, during August at 82 stations was 6.01 inches which is 2.32 inches above normal. Several southern stations and a few northern stations showed negative departures, but for the most part positive prevailed. The greatest monthly total was 12.74 inches measured at Higden, the least, 0.48 inch at Whitecliffs. The average number of rainy days was 10.

VOL. XXXII LITTLE ROCK, ARK., SEPTEMBER, 1927 No. 9

THE LIBRARY OF THE
UNIVERSITY OF ARKANSAS

GENERAL SUMMARY

September was practically a normal month with regard to precipitation while the temperature averaged 1.7° above normal. Temperatures were almost uniformly above normal until the last decade when a moderate cool wave brought the lowest for the month on the 21st and 22d, but there was a re-action to warmer weather by the 25th and the closing days were warm. There were light to moderate showers at numerous stations during the first six days of the month, at scattered stations from the 18th to the 26th, and from the 27th to the close of the month rains exceeding an inch occurred throughout the State. Most streams were at moderately low stages throughout the month, the Ouachita at Arkadelphia being below zero the entire month. The weather was generally favorable for cotton and picking and ginning were proceeding rapidly until halted by the rains of the 27th. There was some weevil and worm damage, leaves being stripped in some fields. The weather was favorable for cutting hay, harvesting rice, and gathering corn, but too dry for late crops. The apple crop was gathered during the month, the yield being small.

Four tornadoes were reported in the State on the 29th. At Rudy, Crawford County, a tornado of moderate intensity occurred at 9:20 a. m., moving from southwest to northeast over a path 300 feet wide, injuring 16 persons and doing property damage estimated at $75,000.

A tornado moving from southwest to northeast over a path about 400 feet wide struck French, Fulton County, about 1:00 p. m. of the 29th killing one, injuring three, and doing slight property damage.

Two tornadoes occurred near Lurton, Newton County, on the night of the 29th. The first occurred about 1-2 mile north of Lurton at 10:00 p. m., the second two miles south at 10:30 p. m. Timber was destroyed in the paths and the storm north of Lurton destroyed a home and school building, but no one was injured. The general direction of movement was from sw to ne.

W. C. H.

TEMPERATURE

The mean temperature for the month of September, as determined from the records of 56 stations, was 75.9° which is 1.7° above normal, Dutton, Fayetteville, Ozark, and Rison being the only stations showing negative departures. The highest monthly mean was 80.0° at Pine Bluff, the lowest 70.6° at Bentonville, a difference of 9.4° between the northwestern and southeastern sections of the State. The highest temperature recorded was 105° at Pine Bluff on the 17th, the lowest, 32° at Dutton on the 21st. Maxima occurred in most sections on about the 12th or 17th and minima on the 21st or the 22nd. The greatest daily range was 45° at Thornburg on the 22nd and Warren on the 18th.

PRECIPITATION

The average precipitation for the 82 station was 3.37 inches which is only 0.06 inch below normal. Amounts were unevenly distributed, monthly totals ranging from 0.75 inch at Morrilton to 11.96 inches at Dutton. The greatest amount measured in any 24 hour period was 1.83 inches at Dutton on the 30th. The average number of rainy days was 6.

VOL. XXXII LITTLE ROCK, ARK., OCTOBER, 1927 No. 10

NOV 30 1927
UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

The outstanding characteristic of the weather in Arkansas during October was the positive temperature departure, all sections showing positive departures and the monthly mean, 66.0°, has been exceeded but twice during the last 38 years. The extreme, 100°, has also been exceeded but twice in the month of October, and has never been equaled so late in the month. While the precipitation for the month averaged slightly above normal, there was a period from the 13th to the 28th when practically no rain occurred and the number of clear days and the percentage of sunshine were considerably above normal. Light to heavy frosts occurred from the 13th to the 19th, but no damage of consequence resulted. Killing frost was recorded at Lambrook on the 19th. The warm weather was very favorable for late cotton and bolls were still developing in northern and northeastern portions of the State at the close of the month. Corn was practically all matured, cotton picking and rice harvesting nearing completion, and threshing well under way at the close of the month. Except for the fact that the latter part of the month was too dry for the germination of fall grains, the weather as a whole was favorable for all farm activities.

A tornado, moving from southwest to northeast over a path about 200 yards wide, struck the town of Dell, Mississippi County, at 11:30 p. m. of the 11th, killing five, injuring 31, and doing property damage estimated at $30,000. W.C.H.

TEMPERATURE

The mean temperature for the month of October, as determined from the records of 56 stations, was 66.0° which is 3.8° above normal, all stations for which normals have been computed showing positive departures. The highest monthly mean was 71.2° at Pine Bluff, the lowest, 60.0° at Dutton, a difference of 11.2° between the northwestern and southeastern sections of the State. The highest temperature recorded was 100° at Dumas on the 26th, the lowest, 30° at Dutton on the 13th, and later dates. The greatest daily range was 55° at Harrison on the 19th.

PRECIPITATION

The average precipitation for 82 stations was 3.13 inches, which is 0.16 inch above normal. Monthly totals ranged from 8.25 inches at Dutton to 0.82 inch at Portland. The greatest amount measured in any 24 hour period was 5.30 inches at Lurton on the 1st. The average number of rainy days was 5.

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXII LITTLE ROCK, ARK., NOVEMBER, 1927 No. 11

GENERAL SUMMARY

The outstanding characteristic of the weather in Arkansas during November was the positive temperature departures. The montb opened with temperatures 10° to 15° above the seasonal average, 96° being record at Dumas on the 1st. this being the highest November temperature on record in Arkansas. A cool wave overspread the State by the 6th with temperatures considerably below normal. This cool spell was of only a few days duration, temperatures being near or above normal from 8th to the 15th. On the 16th another cold wave overspread the State giving the lowest temperatures of the month in most sections on the 17th and 18th. Temperatures returned to normal or above on the 21st and the last decade was unsually warm. Precipitation was practically normal and most of it fell from the 7th to the 19th, 24 hour amounts on the 7th, 8th, 15th, and 16th being heavy, mostly light amounts on other days. The locally heavy rains caused a rapid rise on the White and Black rivers, the Black passing flood stage at Corning, however flood loss was slight.

The weather was mostly favorable for the gathering of crops and outdoor work. Cotton picking was nearing completion at the close of the month, corn mostly gathered, and fall plowing in progress. Some land was being cleared, fences repaired, and the usual late fall activities were being carried on. W.C.H.

TEMPERATURE

The mean temperature for November, as determined from the records of 55 stations, was 56.7° which is 5.1° above normal, all stations for which normals have been computed showing positive departures. The highest monthly mean was 63.8° at Hutting, the lowest, 49.3° at Marked Tree. The highest temperature recorded was 96° at Dumas on the 1st. The lowest was 20° at Harrison and Dutton on the 17th and later dates. The greatest daily range was 49° at Dumas on the 4th.

PRECIPITATION

The average precipitation for 84 stations was 3.67 inches which is 0.02 inch above normal, the geographical distribution being irregular. Monthly totals ranged from 8.18 inches at Little Rock to 0.93 inch at Danville. An appreciable amount of snow was recorded at five stations averaging 1.1 inches. The greatest amount of precipitation measured in any 24 hour period was 5.35 inches at Yancopin on the 16th. The average number of rainy days was 6.

VOL. XXXII LITTLE ROCK, ARK., DECEMBER, 1927 No. 12

GENERAL SUMMARY

December was a month of temperature extremes and locally heavy rainfall, and while all records were within the limits established by previous years, temperature fluctuations were marked and frequent. The closing days of November were unusually warm, but December opened with a cool wave which by the 8th had become severely cold in the northern counties, temperatures being near zero at numerous stations with 14° to 16° recorded in the southern border counties. Warm weather immediately followed with positive departures of 20° to 22° at numerous stations on the 13th. Another cold wave with near zero temperatures in the northern counties occured on the 19th, and by the 29th daily means were again 16° to 20° above normal. On the 31st a severe cold wave began overspreading the State, 2° below zero being recorded at Gravette.

Light rainfall occurred at a few stations on the 1st, at numerous stations on the 7th and 8th, in most sections from the 11th to the 14th, and on the 28th and 29th, amounts being excessively heavy locally on the 13th and 14th, several stations in the northwestern counties reporting from five to seven inches within 24 hours. Flood stages resulted on the White, Black, Little Red, and Petit Jean rivers. A break in the levee on White River near Des Arc inundated several thousand acres, but loss was not large.

A small amount of cotton and corn was gathered during the month, rice threshing was practically completed, and some plowing done early in the month. Meadows were generally in good condition at the close of the month, but oats and winter truck were damaged by the severe freezing weather. W.C.H.

TEMPERATURE

The mean temperature for the month of December, as determined from the records of 58 stations, was 40.9° which is 1.6° below normal. Four southern and one eastern station showed positive departures, negative elsewhere. Monthly means ranged from 49.6° at Huttig to 34.4° at Dutton, a difference of 15.2° between the Ozarks of the Northwest and the southern border. Extremes ranged from 84° at Dumas on the 13th to 2° below zero at Gravette on the 31st. The highest occured in most localities on the 12th or 13th and the lowest about the 8th, 9th, or 31st. The greatest daily range was 55° at Warren on the 31st.

PRECIPITATION

The average precipitation for December, as determined from the records of 87 stations, was 4.18 inches which is 0.13 inch above normal. Monthly totals ranged from 1.18 inches at Thornburg to 10.42 inches at Lutherville. The heavier totals were confined to the northwestern counties, three stations measuring over ten inches. The greatest amout for any 24 hour period was 7.00 inches at Dutton on the 13th. Gravette and Rogers recorded 2.0 and 2.5 inches of snow on the 7th and traces were recorded at numerous stations. The average number of days with 0.01 inch or more precipitation was 6.

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
ARKANSAS SECTION
HARVEY S. COLE, Meteorologist

VOL. XXXII LITTLE ROCK, ARK., YEAR, 1927 No. 13

GENERAL SUMMARY

The outstanding features of the weather in Arkansas during 1927 were the high monthly mean temperatures during the first five months of the year, a cool summer, warm autumn, excessively heavy precipitation, and a flood which because of its magnitude, duration, and destructiveness has not before been equaled in Arkansas' history.

The mean temperature for the year was 63.1° which is 1.9° above normal, all stations for which normals have been computed showing positive departures. Monthly means were below normal in June, July, August and December, above in other months, the February mean, 52.1°, being the highest for February of the past 37 years. All other means were within the limits of previous records. Annual means ranged from 67.4° at Portland to 56.8° at Dutton, a difference of 10 6° between the northwestern and southeastern sections of the State. Annual extremes ranged from 105° at Texarkana on August 1st and Pine Bluff September 17th, to 2° below zero at Gravette December 31st. The maximum temperatures of April and November established new records for Arkansas and the minima of August and September were near the records.

A survey of the precipitation record in Arkansas during 1927 shows that, with the exception of February when the deficiency was 0.73 inch and September when it was 0.06 inch, every month's precipitation total was above normal, April with an average of 12.93 inches, being the wettest month of the year and also the wettest month in Arkansas' Climatological History. Annual totals ranged from 91.72 inches at Marshall to 31.93 inches at Amity, Amity and Portland being the only stations in the State with negative departures for the year. Monthly totals exceeding ten inches occurred locally eight months of the year and 23.80 inches at Story in April is the greatest monthly precipitation on record in Arkansas. The greatest 24 hour amount, 11.40 inches at Story on April 21st, has been exceeded once, 12.00 inches at Arkadelphia, June 28, 1905. The April rains caused an unprecedented flood in all streams of the State, details being given in the "Weather by Months". The precipitation from April 1st to October 31st, which is approximately the growing season in Arkansas, was 42.73 inches which is 14.90 inches above normal. The temperature for the same period averaged 0.7° above normal.

The last killing frost in spring occurred at most southern stations about March 22d and at northern stations about April 22d. The first killing frost in fall occurred about November 6th to 17th, though a few southern stations escaped until December 3rd. For the State as a whole the average dates were March 25th and November 15th, giving a growing season of 235 days. Sunshine for the year averaged about 63% of the possible amount which is considerably below normal. There were 161 clear days, 85 partly cloudy, and 119 cloudy, the number of clear and partly cloudy being about ten each below normal and the cloudy twenty above. There was an average of 99 days with 0.01 inch or more precipitation. W.C.H.

January:—The month was marked by almost continuous sunshine from the 1st to the 12th and almost continuous rain after the 17th. The continuous rains the latter part of the month caused flood stages on the small streams of the State, the Little Red at Dam. No. 1 being near a record high stage. Property damage from the excessive rains was estimated at $200,000. During the first half of the month outdoor work was carried on, but during the latter half everything was at a stand still and in the lowlands all efforts were toward moving people and livestock to places of safety and the re-enforcing of levees.

February:—The weather was unusually warm during February, the monthly mean, 52.1° being the highest on record. The heavy rains of January caused flood stages in all streams and in the lower reaches of the rivers the flood continued from one to two weeks longer. The high water prevented any preparation for crop planting in the lowlands of the eastern counties and the rainfall, fairly evenly distributed throughout the month, kept the soil too wet in most other sections. Fruit was blooming in central and southern sections of the State by the close of the month.

March:—Positive temperature and precipitation departures marked the weather of March. Frequent showers kept the soil too wet for farm work and the close of the month found far less than the usual amount of land prepared for planting. The flooded condition of the eastern lowlands which prevailed during January and February was only partially relieved in March.

April:—High temperatures and excessively heavy rainfall were the outstanding characteristics of the weather during April. The average precipitation for 84 stations was 12.93 inches, monthly totals exceeding 20.00 inches being recorded at numerous stations. The continued rains delayed the planting of crops and excessive rains in Arkansas and nearby portions of Missouri, Oklahoma, and Kansas, caused floods in all streams, most of them reaching record high stages. Many levees broke or were submerged and approximately 6,880 square miles were inundated. All crops and preparation for planting were destroyed, more than 100 persons were drowned, and property valued at over $7,000,000 destroyed.

May:—Warm, rainy weather continued during May. Showers were of almost daily occurrences, rain being recorded in the State every day except the 11th, and on the 22nd heavy to excessive amounts were recorded in most sections. The flooded condition of the eastern lowland improved, but much of the river bottoms was not planted at the close of the month.

June:—Heavy rains kept all streams of the State at moderately high stages throughout the month with flood stages at numerous points practically the entire month. The weather was favorable for the growth of cotton, but cultivation was delayed by frequent showers. Blooms were reported in southern counties at the close of the month, boll weevil in a few localities.

July:—Temperature was slightly below normal and precipitation slightly above. But little rain fell during the first two weeks of the month and farmers were able to clean cotton fields. Showers were frequent during the latter half and cotton made too rank a growth in some localities. No serious damage from weevil or worms occurred. Corn made good progress, especially in the hills, early corn being matured.

August:—The outstanding characteristics of the weather during August were the positive precipitation and negative temperature departures. Lower mean temperatures have been recorded twice in August and heavier rainfall three times since State wide records have been kept. The weather was too cool for cotton and the rainfall too heavy, causing rank growth, but the rains were favorable for hill corn and hay crops. Flood stages occurred at points on the Black, White, Petit Jean, and Arkansas rivers, water running through the breaks in the levees along the lower rivers, flooded 60,000 acres of land doing serious damage to crops in these areas.

September:—The month was warm and generally favorable for picking and ginning cotton, cutting hay, harvesting rice, and gathering corn, but too dry for late crops. Most of the apple crop was gathered during the month, the yield being small.

October—Warm weather continued through most of October, the monthly mean temperature, 66.0°, having been exceeded but twice during the past 38 years and the extreme, 100° on the 26th, has never before been equaled so late in the month. The warm weather was favorable for late cotton. Except for the fact that the latter part of the month was too dry for the germination of fall grains, the weather as a whole was favorable for all farm activities.

November:—Positive temperature departures marked the weather of November, 96° at Dumas on the 1st being the highest November temperature on record in Arkansas. Precipitation was practically normal. Locally heavy rains caused flood stages at a few points on the Black River, but flood loss was slight. The weather was mostly favorable for the usual late fall activities.

December:—The month was marked by temperature extremes and locally heavy rainfall. A cold wave on the 8th brought severely cold weather in the northern sections of the State, but temperatures soon returned to 20° above normal. On the 19th another cold wave brought near zero temperatures at northern stations and on the 31st a severe cold wave began overspreading the State, 2° below being recorded in Benton County. Precipitation for the month was practically normal, but locally heavy rains on the 13th and 14th caused flood stages on the White, Black, Little Red, and Petit Jean rivers. A break in the levee on White River near Des Arc inundated several thousand acres, but loss was not large.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years record: but all complete reports are used in determining section means. T. Precipitation is less than 0.01 inch rain or melted snow. Reference letters [a], [b], [c], appearing in the table indicate number of days missing: for example, [b] represents two days missing. † Also on later dates. †† Post-office addresses of these stations as follows:- Dam No. 1, Judsonia, Ark., Lutherville R. F. D. No. 1, Lamar, Ark. Springbank, Doddridge, Ark. *30 days missing. ¶28 days missing.

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
ARKANSAS SECTION
HARVEY S. COLE, Meteorologist

VOL. XXXIII LITTLE ROCK, ARK., JANUARY, 1928 No. 1

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during January were the positive temperature and negative precipitation departures. The mean temperature for the month, as determined from the records of 58 stations, was 42.7° which is 1.6° above normal, eight scattered stations showing negative departures, positive elsewhere. The highest monthly mean was 48.8° at Huttig and Rison, the lowest, 37.3° at Dutton, a difference of 11.5° between the the northwestern and the southern sections of the State. The highest temperature recorded was 90° at Dumas on the 11th, this being the highest January temperature on record in Arkansas. The lowest was 10° below zero at Lead Hill on the 3d.

The average precipitation for 89 stations was 2.05 inches, which is 50% of the January normal. Positive departures occurred at four northwestern stations, negative elsewhere. The Monthly totals ranged from 0.50 inch at Whitecliffs to 4.60 inches at Huttig. An appreciable amount of snow fell at 26 stations averaging 0.6 inch. Precipitation was general on the 7th, 8th, 17th, 18th, and 19th while amounts were light and scattered other days. The smaller streams of the State showed sharp rises about the 19th to the 21st, while the larger maintained a moderate stream flow throughout the month.

A severe cold wave overspreading the State on the 1st, 2d, and 3d, brought temperatures 10° below zero in the northern border counties, and 7° to 10° to the southern border. All farm work was stopped and oats, winter truck, and late sown alfalfa were damaged in many localities. Temperatures returned to normal about the 7th and thereafter were normal or above until the last decade when near or slightly below. Outside of the first week, the weather during most of the month was favorable for outdoor work and winter crops. Some plowing was done in most localities, especially in southern and central sections. Fruit trees and grapes were pruned and some dormant spraying done.

W.C.H.

Corrections:, 1927

November. Hope, maximum temperature should be 88° on 29th.
December. Fayetteville prevailing wind direction should be s. Huttig mean maximum temperature should be 60.4°; monthly mean 46.7°; departure from normal −2.1°. Mammoth Sprng prevailing wind direction should be nw. Marianna prevailing wind direction should be s. Prescott mean temperature should be 43.8°; departure −1.9°. Searcy prevailing wind direction should be s. Mountain Home, number of clear days should be 14, cloudy 17.
ANNUAL:—Mountain Home, number clear days should be 125z; cloudy 165z.

VOL. XXXIII LITTLE ROCK, ARK., FEBRUARY, 1928 No. 2

GENERAL SUMMARY

Although the temperature for the month averaged more than two degrees above normal and the precipitation more than an inch below there were no record breaking extremes. The mean temperature, as determined from the records of 58 stations, was 45.0° which is 2.2° above normal, nine scattered stations showing negative departures, positive elsewhere. Daily means were almost uniformly above normal from the 1st to the 13th with positive departures of 20° or more on the 5th and 6th. The latter half of the month was cool. The highest monthly mean was 51.6° at Junction, the lowest, 38.8° at Lurton, a difference of 12.8° between the Ozarks in the northwest and the southern border of the State. The highest temperature recorded was 79° at Subiaco on the 5th, an unusually low extreme for the month. The lowest was 10° at Corning on the 17th and Lurton on the 18th.

The average precipitation for 91 stations was 2.23 inches, which is 1.12 inches below normal. A few stations in southwestern and northwestern sections of the State showed positive departures, negative elsewhere. Monthly totals ranged from 4.69 inches at Texarkana to 0.96 inch at Gilbert. A measurable amount of snow occurred at 18 stations averaging 3.0 inches. Amounts ranged from 6.0 inches at Harrison to a trace at numerous stations. Most of the precipitation occurred from the 4th to the 7th and from the 13th to the 24th.

The weather was generally favorable for the usual early spring farm activities. Considerable plowing was done, some spring oats were sown, and truck and gardens were planted in southern sections of the State. Fruit buds were swelling and plums were blooming at the close of the month, however the cool weather the latter half of the month held development in check. Meadows and pastures were in good condition.

W.C.H.

Corrections: January, 1928

Amity maximum temperature should be 78o on the 11th. Booneville greatest 24 hour precipitation should be 1.18 on the 17th.

VOL. XXXIII LITTLE ROCK, ARK., MARCH, 1928 No. 3

GENERAL SUMMARY

The month opened with temperatures generally below the seasonal average. Daily means were also below normal from the 15th to the 20th and the last two or three days of the month, above during the remainder of the month with positive departures of 12° to 18° about the 12th, 24th, and 25th. The monthly mean for 58 stations was 52.7° which is normal for March. Means ranged from 46.8° at Dutton to 58.4° at Texarkana, a difference of 11.6° between the northwestern and southern sections of the State. The highest temperature recorded was 92° at Helena on the 29th, the lowest, 20° at several stations on the 2d and 19th. Killing frost or freezing temperature occurred over practically the entire State on the morning of the 31st, but little damage resulted.

The average precipitation for 89 stations was 2.53 inches which is 2.21 inches below normal, all stations except Helena and Lambrook having less than normal rainfall. Most of the rain fell from the 4th to the 9th and from the 15th to the 17th, showers during the last decade being negligible. Monthly totals ranged from 0.73 inch at Mountain Home to 6.91 inches at Lambrook. The greatest 24 hour amount was 5.05 inches measured at Lambrook on the 9th. The average number of days with 0.01 inch or more precipitation was 6. The average snowfall for eight stations was 0.9 inch.

The light rainiall of the month was very favorable for farm work and preparation and planting were much further advanced than usual. Corn planting was in progress throughout the State at the close of the month, a small amount of cotton had been planted in the southern counties, and sweet potatoes were being bedded. The cold weather retarded vegetation and fruit. Pindall, Searcy County, reported heavy hail on the 25th, stones 1 1-2 inches in diameter falling, but damage was slight.

W.C.H

Corrections: February, 1928

Dutton:--Highest temperature should be 63° on the 28th. Junction:--Partly cloudy and cloudy days should be 7 and 8. Ozark:--Monthly mean temperature should be 44.5°, departure +1.6.

VOL. XXXIII LITTLE ROCK, ARK., APRIL, 1928 NO. 4

THE LIBRARY OF THE
UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during April were the positive precipitation and the negative temperature departures, this being the first month of the year with a sub-normal temperature and the first with a positive precipitation departure.

The month opened with temperatures above normal and daily means continued above during the first five days, but thereafter cool weather prevailed with daily means below normal almost every day, On the 10th, 15th, and 16th unseasonably low temperatures occurred, killing frost or freezing temperature occurring over practically the entire State. Truck, peaches, strawberries, corn, and cotton were damaged, considerable replanting of corn and cotton being necessary.

The mean temperature for the month, as determined from the records of 59 stations, was 57.3° which is 4.1° below normal, all sections showing negative departures. This was the coldest April since 1907 and the third coldest on record. Monthly means ranged from 61.7° at Hope to 51.2° at Lurton, a difference of 10.5° between the Ozarks in the Northwest and the southern counties. The highest temperature recorded was 87° at several stations on the 1st, 2d, and 29th. The lowest was 22° at Dutton on the 10th and Lead Hill on the 15th.

The average precipitation for 89 stations was 8.52 inches which is 3.64 inches above normal. Three stations in the Southwest showed negative departures, positive elsewhere. Monthly totals ranged from 14.01 inches at Huttig to 4.03 inches at Amity. An appreciable amount of snow fell at three southern Stations on the 14th, traces at several stations. The greatest precipitation for any 24 hour period was 6.70 inches at Huttig on the 6th. The average number of rainy days was 9. Heavy to excessive rains from the 4th to the 6th and from the 20th to the 22d packed the soil and caused floods in most streams of the State. In the flood of April 6th to 10th losses of $14,000 were reported on the White and $80,000 on the Arkansas. From the 21st to the close of the month losses of about $75,000 occurred on the White and $5,000 on the Arkansas.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXIII LITTLE ROCK, ARK., MAY, 1928 No. 5

GENERAL SUMMARY

May was marked by rather uniform temperature and moderate rainfall, all extremes being well within the limits established by previous records. Rainfall was light during the first two weeks, but thereafter showers were frequent, rain being reported at one or more stations in the State every day from the 14th to the 31st except on the 24th. Normally May is the wettest month of the year in Arkansas, but despite the frequent showers the latter half of the month, the average for 88 stations was 3.60 inches which is 1.42 inches below normal. Monthly totals ranged from 7.35 inches at Mountain Home to 0.99 inch at Amity. The greatest amount for any 24 hour period was 3.10 inches at Mountain Home on the 21st. The average number of rainy days was 8. The mean temperature, as determined from the records of 58 stations, was 69.5° which is 0.5° above normal. The highest monthly mean was 75.2° at Warren, the least 63.6° at Dutton, a difference of 11.6° between the northwestern and southern sections of the State. The highest temperature recorded was 98° at Portland on the 10th. The lowest was 34° at Thornburg on the 8th. The greatest daily range was 49° at Lead Hill on the 9th.

The weather during the first half of the month was too cool for the growth of cotton, but favorable for planting and cultivation of all crops. During the latter half showers interfered with all farm work and at the close of the month many fields were grassy. Strawberries were late owing to the cool weather and were damaged by the frequent showers. Sweet potatoes were being set at the close of the month and corn, oats, and truck patches were making good growth. The overflow on the White which occurred the latter days of April extended into the early days of May in the lowlands of the eastern part of the State and interfered with planting.

Five persons were killed by lightning in Arkansas during the month, one at Imboden and one at Piggot on the 18th, one at Helena on the 19th, one at Wynne on the 22d, and one near Augusta on the 25th. W.C.H.

Wind, Hail, Tornadoes, May, 1928

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXIII LITTLE ROCK, ARK., JUNE, 1928 No. 6

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during the month of June were the positive precipitation and negative temperature departures, this being the wettest June on record in Arkansas and with the exception of June, 1903, and 1912 the coldest. Cool weather prevailed practically the entire month, daily means being above normal on only eight days. The mean temperature, as determined from the records of 58 stations, was 73.5° which is 3.6° below normal, all stations for which normals have been computed showing negative departures except Amity. Monthly means ranged from 78.2° at Portland and Texarkana to 66.9° at Dutton, a difference of 11.3° between northwestern and southern sections of the State. Extremes ranged from 100° at Amity on the 19th and 20th to 40° at Dutton on the 6th. The lowest June temperature on record in Arkansas is 37° at Russellville June 12, 1903 and at Dutton June 16, 1917.

The average precipitation, as determined from the records of 88 stations, was 9.44 inches which is 5.42 inches above normal, Amity being the only station with a negative departure. Monthly totals ranged from 17.16 inches at Pocahontas to 4.01 inches at Amity. Numerous northern stations measured 12 to 16 inches. Rain fell in the State every day during the month. The average number of rainy days was 13. Eureka Springs and Fayetteville reported 21 rainy days, Piggott 20, numerous stations 15 to 18. The greatest amount measured in any 24 hour period was 4.87 inches at Subiaco on the 13th.

The month as a whole was too cool and too wet for most crops. Cotton made slow progress owing to the cool weather and at the close of the month many fields were grassy. Corn, where cultivated, made satisfactory growth, but in many fields the ground being soaked almost continuously, cultivation was impossible and the crop became foul and yellow. The rains also interfered with harvesting hay crops and caused grapes to rot.

The heavy rains caused floods on the White, Black, Little Red, Saint Francis, and Petit Jean rivers and near flood stages on other streams. Levees broke at several points on the White and a general overflow of the lowlands in the eastern section of the State resulted. Approximately 100,000 acres were inundated and a loss of over $1,000,000 sustained. W.C.H.

Wind, Hail, Tornadoes, June, 1928

Place	Date	Time	Character	Dir. from	width yards	Killed	Inj.	Damage
Bates to Cauthron	12	6.30pm	Tornado	sw	100	2	1	$10,000
Eureka Springs	9	1.30am	Moderate Hail	....	.....	.....	.....	Slight
Vanndale	28	4.00am	Heavy Hail	nw	.....	.....	.....	$400

Corrections: May, 1928

Harrison, Mean temperature should be 67.2°, departure from normal +1.8°.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXIII LITTLE ROCK, ARK., JULY, 1928 No. 7

GENERAL SUMMARY

Near normal conditions prevailed in Arkansas during the month of July. The mean temperature for 60 stations was 80 3° which is 0.3° above normal and the average precipitation for 90 stations was 3.66 inches which is 0.16 inch below normal. Monthly means ranged from 84.2° at Warren to 73 5° at Dutton, a difference of 10.7° between the northwestern and the southeastern sections of the State. Extremes ranged from 102° at Hope on the 23d to 52° at Dutton on the 14th. Daily means were generally normal or above the first decade of the month, the highest occurring early in the month in practically all sections of the State. There was a cool wave over the State about the middle and the closing days of the month, the lowest occurring in most sections about the 14th or the 28th. Practically no rain fell during the first week but thereafter showers were frequent and while the geographical distribution was somewhat irregular the heavier totals were mostly confined to the southwestern fourth of the State and the lighter to the northeastern. Monthly totals ranged from 9.84 inches at Waters to 0.46 inch at Gilbert. Eleven stations reported monthly totals of 7.00 inches or over, ten of these being in the southwestern counties, Mammoth Spring with 7.44 inches and Gravette with 6.37 inches being the only station north of the Arkansas river with heavy rainfall. The greatest amount measured in 24 consecutive hours was 5.80 inches at Waters on the 16th. Mammoth Spring measured 5.10 inches on the 8th. The average number of days with 0 01 inch or more precipitation was 8.

The dry weather the first of the month was very favorable for cotton, cultivation progressing rapidly. Many fields were cleaned, but in the lowlands many fields were still grassy at the close of the month. The crop as a whole made very good progress and was blooming throughout the State at the close of the month. Corn, where cultivated, made excellent progress in the lowlands, but in the hill sections of the State it was too dry. Peaches, melons, and cantaloupes were being marketed the latter part of the month. W.C.H.

VOL. XXXIII LITTLE ROCK, ARK., AUGUST, 1928 No. 8

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during August were the positive temperature and precipitation departures. All stations for which temperature normals have been computed showed positive departures except Ozark. Negative precipitation departures occurred at 21 southern stations and 4 northern, positive elsewhere.

The month opened with temperatures near or slightly above normal and daily means were slightly above on most days until the 31st when a moderately cool wave overspreading the State brought the lowest for the month at numerous stations. The mean temperature for the month, as determined from the records of 58 stations, was 81.3° which is 1.6° above normal. Monthly means ranged from 85.8° at Pine Bluff to 75.2° at Dutton, a difference of 10.6° between the northwestern and southeastern sections of the State. The highest temperature recorded was 105° at Texarkana on the 28th, the lowest, 51° at Lurton on the 31st. Temperatures of 100° or higher were recorded at 22 stations during the month. The greatest daily range was 39° at Lead Hill on the 14th.

THE LIBRARY OF THE
OCT 4 1928
UNIVERSITY OF ILLINOIS

The average precipitation for 88 stations was 4.62 inches which is 0.93 inch above normal. Monthly totals ranged from 0.73 inch at Portland to 10.57 inches at Thornburg. Wynne and Gravette also measured over ten inches. The greatest rainfall for any 24 hour period was 5.69 inches at Bentonville on the 4th. The average number of rainy days was 7.

The weather during the month was mostly favorable for cotton. At the close of the month the crop was maturing rapidly and picking had started in the southern counties. Early corn which was about matured by the close of the month was injured by the dry weather in some localities. Fruit, grapes, melons, cantaloupes, and truck made satisfactory growth during the month.

OL. XXXIII LITTLE ROCK, ARK., SEPTEMBER, 1928 No. 9

GENERAL SUMMARY

September, 1928, was an unusually cool, dry month, lower mean temperatures for the State being reported but three times in the past 38 years, and the average precipitation being the least on record in that time.

The mean temperature for 56 stations was 70.5° which is .7° below normal. The lowest September mean on record is 7.3° which occurred in 1918, lower means than those of the ast month also being reported in 1902 and 1924. Hot Springs nd Pine Bluff were the only stations in the State having positive temperature departures, the departures at those places eing +0.5° and +0.3°, respectively. The greatest departure ccurred in northern and eastern portions where a number of tations reported —6.0° or more. The highest temperature for he month was 101° at Texarkana on the 15th, three other tations having 100°. The lowest temperature reported was 32° at Dutton on the 24th, two other stations having 33°. The highest temperatures occurred at nearly all stations from the 8th to the 14th and on the 29th, the lowest on the 19th or 24th.

The average precipitation for the 86 stations reporting was 0.45 of an inch which is 2.98 inches less than normal. The least previous September average in the past 38 years was 0.60 of an inch in 1897. No rainfall was reported during the month at 12 stations and only a trace at five other stations. The monthly amounts were greater in eastern and southern portions than elsewhere, 2.60 inches at Wynne being the greatest monthly amount reported. Ten other stations reported an inch or more. The greatest 24 hour amount was 2.40 inches at Brinkley on the 1st.

Heavy frost occurred at Corning and Dutton on the 24th, light frost at a number of northern stations.

MISCELLANEOUS PHENOMENA
(Dates and number of stations reporting)

THUNDERSTORMS:--5th, 1; 10th, 4; 14th, 12; 15th, 18; 16th, 3; 21st, 1: 29th, 3.

DENSE FOG:------1st, 1; 4th, 1; 7th, 1; 8th, 1; 16th, 1; 17th, 1; 18th, 1; 19th, 1; 20th, 4.

SOLAR HALOS:---9th. 1; 12th, 1; 21st, 1; 22d, 3; 26th, 1.

HEAVY FROST:---Corning, Dutton, 24th.

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXIII LITTLE ROCK, ARK., OCTOBER, 1928 No. 10

GENERAL SUMMARY

The outstanding characteristics of the weather in Arkansas during the month of October were the positive temperature and precipitation departures. All stations for which normals have been computed showed positive temperature departures and all except eight, positive precipitation departures. During the past 38 years but two Octobers have been warmer, 1897 and 1919 and the extreme of 100° has been exceeded but twice and then by only 1°. Daily means were above normal from the 1st to the 16th or 18th, slightly below from the 18th to the 23d, and 6° to 12° below the closing days of the month, the lowest occurring in most sections from the 29th to the 31st. Most of the rainfall occurred from the 2d to the 5th, 15 to 17th, on the 22d, and from the 27th to 30th, excessively heavy local amounts occurring on the 16th and 17th.

The mean temperature for the State, as determined from the records of 57 stations was 66.3° which is 4.1° above normal. Monthly means ranged from 61.2° at Dutton to 71.8° at Amity, a difference of 10.6° between the northern and southern portions of the State. Extremes ranged from 100° at Pine Bluff on the 9th to 27° at Dutton on the 23d. The greatest daily range was 53° at Grannis on the 1st. The average precipitation for 87 stations was 4.74 inches which is 1.77 inches above normal. Monthly totals ranged from 1.33 inches at Amity to 11.58 inches at Piggott. The greatest 24 hour precipitation was 6.28 inches at Piggott on the 16th.

Although more than the normal rainfall occurred the weather was generally favorable for fall work. Heavy to killing frost or freezing temperatures were recorded over much of the State the closing days of the month, but in many localities cotton and truck were still green. Corn and feed crops were gathered, sweet potatoes dug, cotton was picked, and rice harvested and threshed under favorable conditions. The showers the latter part of the month kept the ground in good condition for seeding and the germination of winter grains. W.C.H.

CLIMATOLOGICAL DATA

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU
ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXIII LITTLE ROCK, ARK., NOVEMBER, 1928 No. 11

GENERAL SUMMARY

Although the weather in Arkansas during the month of November was colder and wetter than the average, there were no record breaking extremes or unusual features. The month opened with temperatures near or somewhat below the seasonal average and no marked positive departures occurred until near the middle of the month when daily means were from 6° to 20° above normal for about a week. Thereafter temperatures were generally somewhat below normal with killing frost or freezing in most sections by the 20th, the coldest of the month about the 26th. The mean temperature, as determined from the records of 58 stations, was 50.2° which is 1.4° below normal, all except seven scattered stations showing negative departures. Monthly means ranged from 54.8° at El Dorado to 44.4° at Dutton and extremes from 82° at Huttig on the 8th and Crossett and Dumas on the 15th, to 13° at Dutton on the 26th. Extremes occurred on practically these dates throughout the State. The greatest daily range was 51° at Hope on the 21st.

Most of the precipitation occurred on the 1st, 2d, 14th to 17th, and 27th to 30th, amounts other days being light and scattered. The average for the month at 85 stations was 4.25 inches which is 0.60 inch above normal. A trace of snow was reported at seven northern stations, but all the measurable precipitation fell as rain. Monthly totals ranged from 7.71 inches at Bee Branch to 1.80 inches at Blytheville. The greatest amount measured in any 24 hour period was 3.10 inches at Bee Branch and Waldron on the 29th.

The usual late fall activities were carried on during the month under fairly favorable conditions. Cotton picking and rice threshing made good progress, but at the close of the month considerable cotton and rice still remained in the field. Some wheat and winter oats were sown. The killing frost did practically no damage, all crops being matured. All streams continued at moderately low stages throughout the month.

W.C.H.

ARKANSAS SECTION

HARVEY S. COLE, Meteorologist

VOL. XXXIII LITTLE ROCK, ARK., DECEMBER, 1928 No. 12

GENERAL SUMMARY

The weather in Arkansas during December, 1928, averaged slightly warmer and wetter than normal, but there were no marked extremes of temperature or excessively heavy rainfall. Near normal temperatures prevailed the opening days of the month. A moderately cool wave about the 8th or 9th brought the lowest temperatures of the month in most sections, though the lowest for all stations did not occur until the 20th. From the 12th to the 15th positive departures of 10° to 15° occurred and again on the 28th positive departures were about 14°. During other periods daily means were near normal.

Although the precipitation for the month as a whole was above normal, the number of rainy days was below, practically all rain occurring on the 4th, 11th to 17th, and at a few scattered stations the closing days of the month. Three northwestern stations, Bentonville, Eureka Springs, and Rogers reported 1.0 inch, 0.5 inch, and 0.1 inch of snowfall. A few other northern stations reported a trace, all other precipitation falling as rain.

The mean temperature for 57 stations was 43.4° which is 0.9° above normal. Negative departures occurred at about a dozen stations, positive at all other for which normals have been computed. Monthly means ranged from 50.2° at Hope to 37.8° at Dutton, a difference of 10.2° between the southern and northwestern sections of the State. Extremes ranged from 10° at Dutton on the 20th to 87° at Calico Rock on the 28th. The highest occurred in practically all sections on the 28th.

The average precipitation for 87 stations was 4.41 inches which is 0.36 inch above normal. Monthly totals ranged from 1.67 inches at Fort Smith to 8.34 inches at Grannis. The greatest amount measured in any 24-hour period was 4.80 inches at Texarkana on the 17th. The average number of rainy days was 6.

The month as a whole was as favorable for outdoor work as the average winter month. Cotton picking and rice threshing were nearly completed at the close of the month. Except for the unfavorable effect of frequent periods of freezing and thawing weather, wheat, oats, meadows, pastures, and winter truck made satisfactory progress during the month. There were no sleet or wind storms of consequence and dirt roads were passable most of the month. All streams remained at moderately low stages.

W.C.H.

Temperature and precipitation departures computed for stations having ten or more years record. All complete reports used in means. T. less than 0.01 inch rain or melted snow. ††Received too late for means and summaries. Reference letters [a],[b],[c], number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Index, Route A, Texarkana; Junction, Route 3, Junction City; Lutherville, Route 1, Lamar; Springbank, Doddridge. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖24 hours ending 7 a. m. *Amount included in next measurement.

Daily Precipitation for December, 1928

VOL. XXXIII LITTLE ROCK, ARK., YEAR, 1928 No. 13

GENERAL SUMMARY

Considering the year as a whole, there were no marked departures from normal weather, the annual temperature, 61.1°, being only 0.1° below normal and the annual precipitation, 50.50 inches, 2.78 inches above normal. The weather of the individual months showed a wide range, but the heavy rains of April and June were offset by unusually dry weather in January, March, and September and an abnormally cold April by a warm October. Extremes of temperature were within the limits established by previous records though unusually low minimum temperatures were recorded in June and high maximum temperatures in October. The highest temperature recorded during the year was 105° at Texarkana on August 28th, the lowest, 10° below zero at Lead Hill January 3d. Neither of these extremes is unusual in Arkansas. August, with a mean temperature of 81.3°, was the warmest month of the year, January, with a temperature of 42.7°, the coldest. Normally January is the coldest and July the warmest month of the year. Monthly means were normal or above in January, February, March, May, July, August, October, and December, below only four months of the year, however the deficience of the four slightly more than completely balanced the positive departures of the eight giving an annual mean 0.1° below normal. Annual means ranged from 55.1° at Dutton to 65.1° at Texarkana, a difference of 10.3° between the Ozarks in the northwest and the southern border of the State. This is about the normal geographical difference.

The average precipitation of 81 stations with an unbroken annual record was 50.50 inches which is 2.78 inches above normal. June with an average rainfall of 9.44 inches was the wettest month of the year, April with 8.52 inches next, and September with 0.45 inch, the driest. Annual amounts were above normal in northern and northwestern counties, along the Mississippi River from Mississippi County southward to the mouth of the Arkansas, and at several stations in the Southwest, below elsewhere. Practically all precipitation fell as rain. Of the stations reporting an appreciable amount of snow the average for the year was 6 inches. Precipitation was above normal during April, June, August, October, November, and December, below the other six months. The greatest monthly total was 17.16 inches at Pocahontas during June. A dozen stations reported no rain during September. The greatest 24 hour amount during the year was 6.70 inches at Huttig on April 6. The heavy rains of April and June brought flood stages on most streams of the state, but no such overflow as was experienced in 1927. The precipitation from April 1st to October 31st, which is approximately the growing season in Arkansas, was 35.03 inches which is 7.20 inches above normal.

The growing season was about 5 days shorter than the average. The last killing frost in spring occurred at most stations April 16th and the first in the fall on November 20th, though a number of northern stations reported killing frost October 31st. The length of the growing season, from the last killing frost in spring to the first in autumn at 85 stations, was 219 days and ranged from 269 days at Pocahontas to 178 at Mount Ida. There were 188 clear days during the year, 75 partly cloudy, and 102 cloudy. There were 86 days with 0.01 inch or more precipitation. The prevailing wind was from the south.

W.C.H.

WEATHER BY MONTHS

January:—A severe cold wave overspread the State the opening days of the month giving 10° below zero at Lead Hill, this being the lowest temperature in the State during the year. The weather moderated after the first week, the highest January temperature on record, 90°, being recorded at Dumas on the 14th. Precipitation averaged 50% of the normal. The weather during the middle and latter parts of the month was generally favorable for outdoor work, some plowing being done in central and southern sections of the State. Snowfall was light averaging only 0.6 inch at 26 stations.

February:—Temperatures were above normal the first half of the month and below the latter half, the monthly mean being 2.2° below normal. Precipitation was generally light, the average being 1.12 inches below normal with no heavy totals. The snowfall for 18 stations averaged 3.0 inches. The weather was generally favorable for the usual early spring farm activities.

March:—The temperature was normal and precipitation light, only about 50% of the normal rainfall occurring. Conditions were very favorable for farm work and preparation and planting were much further advanced than usual at the close of the month. Corn planting was in progress the extreme South State and a small amount of cotton was planted in southern counties.

April:—The outstanding characteristics were the positive precipitation and negative temperature departures. The opening days of the month were warm, but from the 16th to the 16th unseasonably low temperatures occurred killing frost or freezing temperatures being reported over practically the entire State. Truck, peaches, strawberries, corn, and cotton were damaged, considerable replanting being necessary. The monthly mean temperature was the lowest since April, 1907, and the third lowest on record. Precipitation averaged 8.52 inches, 3.64 inches above normal. Heavy to excessive rains from the 4th to the 6th and from the 20th to the 22d packed the soil and caused floods in most streams of the State. Flood loss on the White and Arkansas was estimated at $174,000.

May:—May was marked by rather uniform temperature and moderate rainfall, but conditions were mostly unfavorable for planting and cultivation of crops. During the first half of the month temperatures were too low for the growth of cotton and during the last half showers were too frequent for cultivation. Strawberries were late owing to the cool weather and were damaged by the showers. The overflow on the White the closing days of April extended into May in the lowlands of the eastern part of the State and interfered with planting.

June:- Positive precipitation and negative temperature departures characterized the weather of June, this being the wettest June on record in Arkansas and with but two exceptions the coldest. Rain fell in the State every day during the month, the average number of rainy days being 13. The weather was too cold and too wet for crops to make satisfactory progress. Many fields were soaked almost the entire month, cultivation being impossible. Floods occurred on the White, Black, Little Red, Saint Francis, and Petit Jean rivers and near flood stages on other streams. Levees broke at several points on the White and a general overflow of the lowlands in eastern sections of the State resulted. Approximately 100,000 acres were inundated and $1,000,000 loss sustained.

July:—Temperature and precipitation were practically normal during July. The first of the month was dry and very favorable for cotton. Upland fields were cleaned, but in the lowlands many fields were still grassy at the close of the month. Peaches, melons, and cantaloupes were marketed the latter part of the month.

August:—The temperature averaged 1.6° above normal and the rainfall 0.93 inch above. Day temperatures of 100° or slightly higher were recorded frequently during the month. The weather was generally favorable for growing crops and at the close of the month cotton picking had started in southern counties. Early corn was injured by dry weather in some localities. Minor crops made satisfactory progress.

September:—September was a cool dry month, a lower mean temperature for this month being reported only three times during the past 38 years, and the average precipitation for this month is the least on record. Many stations reported no rainfall during the month and the average for 86 stations was only 0.45 inch. The weather was favorable for harvesting crops.

October:—October was a warm wet month, but two Octobers during the past 38 years being warmer. Precipitation averaged 1.77 inches above normal with heavy to excessive local amounts on the 16th and 17th. Heavy to killing frost occurred at numerous stations the closing days of the month. Corn and feed crops were gathered, sweet potatoes dug, cotton was picked and rice harvested under favorable conditions. Showers the latter part of the month kept the soil in good condition for seeding and the germination of winter grains.

November:—Killing frost or freezing temperature occurred over the entire State by the 20th, but little damage resulted as all crops were matured. The usual late fall activities were carried on during the month under near normal conditions. Cotton picking and rice threshing made good progress, but at the close of the month considerable cotton and rice still remained in the field.

December:—The weather averaged slightly warmer and wetter than normal. A moderately cold wave about the 8th or 9th brought the lowest temperature of the month in most sections of the State. Snowfall was light, an appreciable amount being reported at only three stations. The month as a whole was favorable for outdoor work as the average winter month. Frequent periods of freezing and thawing weather were unfavorable for wheat and oats.

The departures from normal temperature and precipitation are computed only for stations having ten or more years record, but all complete reports are used in determining section means. T., less than 0.01 inch rain or melted snow. Reference letters [a], [b], [c], appearing in the table indicate number of days missing: for example, [b] represents two days missing. † Also on later dates. †† Post-office addresses of these stations as follows:- Index, Route A, Texarkana, Ark., Lutherville, R. F. D. No. 1, Lamar, Ark. Springbank, Doddridge, Ark. *30 days missing.
